Fedora KnowledgeBase

KnowledgeBase is a framework designed to help users become immediately productive with DuraSpace technologies. The initial content focuses on how to set up and run a repository using either DSpace or Fedora. The material contained here is not a duplication or replacement for the official software documentation, but a supplemental resource, including dynamic content delivered via the text guide, screencasts, webinar recordings, etc. KnowledgeBase is a collaboration among DuraSpace, the not-for-profit supporting DSpace and Fedora, developers, service providers and user communities. If you are interested in helping with KnowledgeBase or have feedback/questions, please contact Valorie Hollister at vhollister@duraspace.org.

Before getting started, learn some Fedora basics:

- The Fedora Basics - *a quick Fedora overview*
- See examples - *Fedora repositories in action*
- Watch a video - *Fedora community stories about access and management*
- Fedora FAQs - *get answers to common questions*

Get started with Fedora KnowledgeBase:

- **Introduction to Fedora**
- **Installation & Set-Up**
- **Core Interfaces & Integrations**
- **Fedora Administration**
- **Applications Built on Fedora**
