

DSPACE DIRECT

Content Migration

DuraSpace can migrate content out of existing DSpace repositories (any version), or out of other systems that can export metadata to a CSV file.

Some notes on what content we are unable to migrate to DSpaceDirect:

- We are unable migrate content out of proprietary repository systems such as CONTENTdm and BePress.
- We are unable to combine separate repositories into a single repository.
- We are unable to migrate repositories over 1 TB (content plus index).
- We are unable to migrate any custom Java code, as this can detrimentally affect the upgrade process.
- We will not migrate any database-level customizations, including custom database tables or columns.

If your content migration needs cannot be met by DSpaceDirect, we recommend that you contact our [Registered Service Providers](#). These providers can accommodate larger and more complex migrations into hosted DSpace repositories.

To create a custom quote for content migration, DuraSpace staff will require the following information:

Institution Name:

- 1. Please describe your current repository, including version and backend system (i.e. Oracle, Postgres, etc).:**
- 2. What is the total GB of your current repository (content and database)?**
- 3. Please review our Add-On Packages which list the custom configurations available in DSpaceDirect. Which Add-On Packages would you like to include in your quote?**
- 4. Are there any other custom configurations you wish to retain after the migration? If so, please describe them.**
