

Using the MARCXML Module

Enabling the MARCXML Module will add new options on ingesting or viewing an object.

Using MARCXML on Ingest

1. Add an object to a collection just as you normally would.
2. After selecting a Content Model and Form, the next step will present the option to browse for a MARCXML record to associate with your object:

The screenshot shows the 'Repository' management interface. At the top, there are links for 'My account' and 'Log out', and tabs for 'DATASTREAMS', 'PROPERTIES', and 'COLLECTION'. The breadcrumb trail is 'Home > Islandora Repository > Repository > Manage'. The main section is titled 'MARCXML File' and contains a text input field, a 'Browse...' button, and an 'Upload' button. Below the input field, a note states: 'A file containing a MarcXML record, to be transformed to MODS. Select no file to create a record from scratch.' At the bottom of the form are 'Previous' and 'Next' buttons.

3. The standard MODS ingest form will now be pre-populated with data from your MARC record. You can add or edit information as desired. All data will be saved as a MODS record.

Viewing MARC XML

All objects with a MODS datastream will also be viewable as a MARC record. This record can be downloaded as MARC XML.
