Summary

DSpace 3.3 is a bug fix release to resolve any issues located within [DSpace 3.0](#), [DSpace 3.1](#) or [DSpace 3.2](#). As it only provides bug-fixes, DSpace 3.3 should constitute an easy upgrade from DSpace 3.x for most users. No database changes or additional configuration changes should be necessary when upgrading from DSpace 3.x to 3.3.

This small bug fix release addresses a number of issues that have cropped up in 3.x. These issues include:

- Handle prefix containing a dot generated incorrect identifier.uri ([DS-1536](#))
- "Out of Memory" errors may occur when indexing large bitstreams/files in Discovery ([DS-1958](#))
- A possible memory leak in the OAI webapp ([DS-1898](#))
- A problem with repeatable fields in XMLUI submission forms losing values ([DS-1893](#))
- The "dspace classpath" command threw an error ([DS-1998](#))
- Thumbnails were not displayed when using JSPUI + Oracle database ([DS-2013](#))
- A fix in OAI harvester test for source sites with many OAI sets ([DS-1834](#))
- If the optional SOLRBrowseDAO was enabled, attempts to remove items may have failed with a database exception ([DS-1619](#))
- Other minor fixes (see full list below)
