Structure - Format checking of data entry in input forms

Title (Goal)	Structure - Format checking of data entry in input forms
Primary Actor	End User | Administrator
Scope	
Level	
Story (A paragraph or two describing what happens)	As a DSPACE admin I frequently get requests to correct mistyped meta-data or meta data that does not conform to a local standard. Some of these mistakes can be caught by adding a format property to the field definition in input-forms. xml • extent field in one form might be '[0-9]* pages' in another but '[0-9]+ [KMGT]B' • email should look like — some wicked reg-exp
