UI examples of inspirational design and functionality

The DSpace 7 UI Outreach Group is collecting screen shot examples of inspirational UI design and functionality for the different pages of DSpace as a resource for development of the DSpace 7 UI. The overall goal is that DSpace 7 will represent "the best of both worlds" when it comes to unifying XMLUI and JSPUI.

But if BOTH JSPUI and XMLUI are lacking in important areas, we're also looking outwards to other systems to see how we can pick low hanging improvement fruit.

UI Aspects visible on EVERY PAGES

This includes headers, footers and navs (IF navs are present everywhere)

News => KEEP

Community listing + Discover facets next to eachothers

- => I personally think community list shouldn't be on the homepage. Too cumbersome if list is long
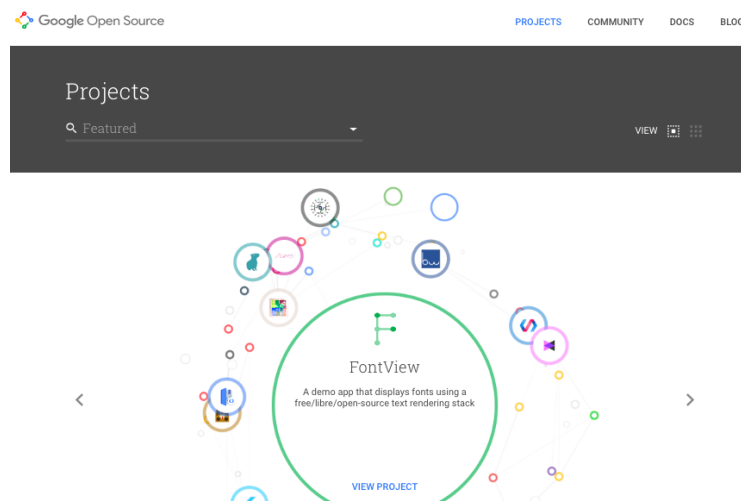

DSpace-CRIS out-of-box and typical "customization"	Andrea Bollini (4Science)	
https://dspace-cris.4science.it/ http://ktisis.cut.ac.cy/	- Removed the top community list by default - More editable html section (head, side & footer) - central role of the search - Infographics about virtual aggregation of the repository content (in dspace-cris we have additional entities but it can be also a group by a custom solr query, dc. type, etc.) - More "list of content": recent submission and most viewed, downloaded - the navigation bar include links to virtual section of the repository Typically insitutions use the html editable section to put - carousel of images / institutional news - link to other general services (footer) - often the central panel with the search box and infographics is enlarged to the full row and the additional side news section if used is put on a single middle row	
Homepage with animated "carousel" / "discovery thingy" https://opensource.google.com/projects/explore/featured	Bram Luyten (Atmire) - Visually eye catching section that draws the user to recent /highlighted content<ol type="a"> - In a DSpace context, this could be the thumbnails of recent items, or highlighted items /collections - Search box that could also function to show the user the (top level) communities. The fact that the box does search "everywhere" by default, but allows you to drill down to a particular topic /community is very nice - The SEARCH feature & listing of search results seems TOO LIGHT. Only sorting between relevance and name. No facets. I'm convinced we still need facets in DSpace search. Although there's something to say for simplicity as well.	2017 June 7 interesting but not enthusiastic about this viewer
	Monika Mevenkamp	2017 June 7
	simple but powerful	would be a very good customizable option

ORGANIZATION AND DELIVERY OF SCHOLARLY COMMUNICATIONS SERVICES BY ACADEMIC AND RESEARCH LIBRARIES IN THE UNITED KINGDOM: OBSERVATIONS FROM ACROSS THE POND

March 31, 2017   Author: Christine Fruin

Abstract: The U.K. library community has implemented collaborative strategies in key scholarly communication areas such as open access mandate compliance, and U.S. librarians could benefit from learning in greater detail about the practices and experiences of U.K. libraries with respect to how they have organized scholarly communication services. **METHODS** In order to better understand the scholarly communication activities in U.K. academic and research libraries, and how U.S. libraries could apply that experience in the context of their own priorities, an environmental scan via a survey of U.K. research libraries and in-person interviews were conducted. **RESULTS** U.K. libraries concentrate their scholarly communication services on supporting compliance with open access mandates and in the development of new services that reflect libraries' shifting role from information consumer to information producer. **DISCUSSION** Due to the difference in the requirements of open access mandates in

Abstract

In this paper we describe DSpace™, an open source system that acts as a repository for digital research and educational material produced by an organization or institution. DSpace was developed during two years' collaboration between the Hewlett-Packard Company and MIT Libraries. The development team worked closely with MIT Libraries staff and early adopter faculty members to produce a 'breadth-first' system, providing all of the basic features required for a digital repository service. As well as functioning as a live service, DSpace is intended as a base for extending repository functionality, particularly to address long-term preservation concerns. We describe the functionality of the current DSpace system, and briefly describe its technical architecture. We conclude with some remarks about the future development and operation of the DSpace system.

Extracted Key Phrases

So much awesomeness don't know where to begin

http://scholarship.law.missouri.edu/jdr/

Digital Commons at University of Missouri Law School

Felicity Dykas (Missouri)

Like the drop down box from which users can choose an issue. Once an issue is chosen, the pdfs are organized under categories - which vary from issue to issue

Examples:

- Front matter
- Conferences
- Notes

Submission forms

Essential features / Links to use cases

Submitters should not lose information: explicit or implicit saving

Compatible with the current definition of input-forms.xml, meaning that:

- Different form configurations per collection should remain supported
- Type-bind showing of particular fields should remain supported

Examples

Screen shot and source URL	Individual Observations	Joint community opinion
Standard DSpace 6 XMLUI submission forms		
Standard DSpace 6 JSPUI submission forms		

Community page, Collection page, overview
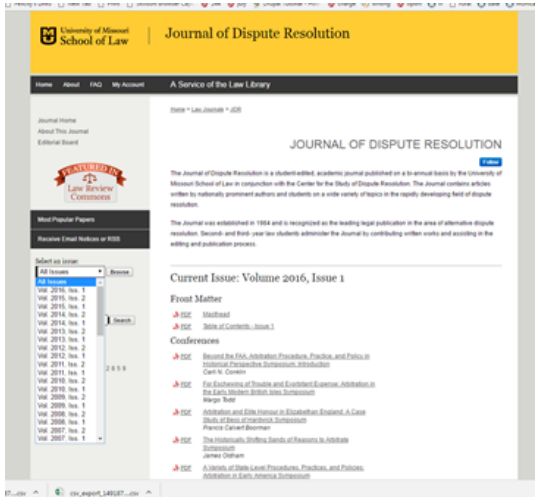

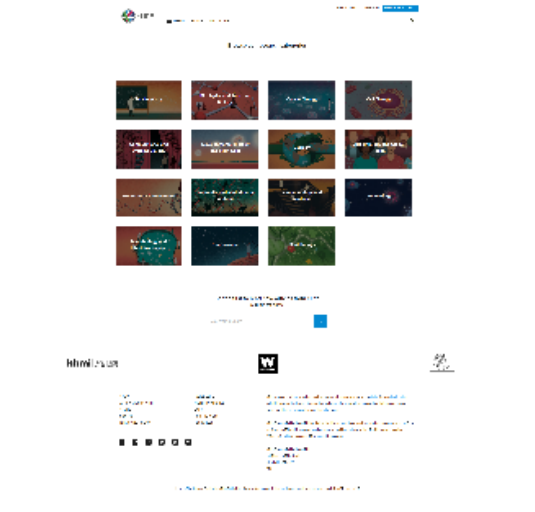

Because a community in DSpace can have many subcommunities, every community can be a tree in itself.

So the challenge to represent ONE community (and its sub communities) is actually very similar to representing ALL top level communities.

...

Examples

Screen shot & Source URL	Individual Observations	Joint Community Opinion
  http://scholarship.law.missouri.edu/jdr/ Digital Commons at University of Missouri Law School	Felicity Dykas (Missouri): Like the drop down box from which users can choose an issue. Once an issue is chosen, the pdfs are organized under categories - which vary from issue to issue Examples: - Front matter - Conferences - Notes	
  https://elifesciences.org/subjects	Arthur Smith: Simple categories, visually easy to browse.	

Author profile

Author profiles are NOT a default feature of DSpace 6 JSPUI or XMLUI. Maybe we should remove this section as a whole, if we're not adding author profiles in DSpace 7.
