- JaCoCo
- JCR
- Jenkins
- Jetty
- JGroups
- JUnit
- LDPath
- LevelDB
- Maven3
- ModeShape
- Nexus
- Sesame
- Sonar
- Spring3
- Travis
- XACML

## ActiveMQ

Messaging middleware used by Fedora 4 to publish repository events to consumers

## Infinispan

The data grid used by Modeshape for storage and clustering

## JaCoCo

A code coverage tool

## JCR

A Java specification for hierarchical repositories

## Jenkins

A continuous-integration tool (<http://jenkins.fcrepo.org/>)

## Jetty

A light-weight servlet container

## JGroups

Clustering technology

## JUnit

A unit testing framework

## LDPath

A library for querying and retrieving resources by following RDF links, similar to XPath

## LevelDB

The default key-value store used by Fedora 4 to persist non-binary resources

## Maven3

A build tool. Fedora 4 code is built using Maven

## ModeShape

Opensource implementation of the JCR specification developed by JBoss, used by Fedora 4

## Nexus

A Maven repository used to distribute software artifacts

## **Sesame**

A tooling framework for RDF

## **Sonar**

A source code metrics reporting tool (<http://sonar.fcrepo.org/>)

## **Spring3**

A dependency-injection and component-wiring framework

## **Travis**

A continuous-integration tool

## **XACML**

XML language to specify authentication policies
