  - Updates from Giuseppe on Authentication
    - PR coming soon. But there's an issue on the REST side of things
    - Token expiration is an issue. Angular tries to use an expired token at times
      - Working on a fix
      - Token has an address of first request. Needs to be updated to use server address to allow validation of token.
      - Server side rendering makes this look like a session hijack, if the server is different from the client.

- REST API Updates (via Andrea)
  - ⬚ponse issues: Unable to locate Jira server for this macro. It may be due to Application Link configuration.
  - ⬚ PR will be created soon.
    - Reminder this will be for Advanced/Configurable Workflow only. Traditional workflow will be dropped in DSpace 7.
