

Q1 How long have you been using DSpace (in years)?

Answered: 117 Skipped: 1

Answer Choices	Responses	
Less than 1 year	13.68%	16
1-2 years	11.97%	14
3-4 years	16.24%	19
5-6 years	19.66%	23
6-8 years	23.08%	27
More than 8 years	15.38%	18
Total		117

Q2 What version of DSpace do you currently use?

Answered: 115 Skipped: 3

Answer Choices	Responses
1.4.x or earlier	2.61% 3
1.5.x	2.61% 3
1.6.x	6.09% 7
1.7.x	10.43% 12
1.8.x	28.70% 33
3.x	49.57% 57
4.x	10.43% 12
Total Respondents: 115	

Q3 What is your country?

Q10 Does your repository integrate with any other software platforms, or are there systems it should integrate with? Please list them and briefly describe the integration:

Answered: 51 Skipped: 67

#	Responses	Date
1	We utilize local authentication via Shibboleth	3/7/2014 4:16 PM
2	We display records from the repository in Primo. We are planning to push records to WorldCat.	3/7/2014 11:29 AM
3	Symplectic Elements	3/6/2014 2:19 PM
4	Workflow Mgmt System (homegrown)	3/6/2014 10:06 AM
5	We index our repository content in our Primo discovery system.	3/6/2014 9:35 AM
6	Voyager,Archives Canada (LAC), Planning BioMed	3/5/2014 5:13 PM
7	Web site	3/5/2014 3:50 PM
8	Our repository is integrated with Blackboard as a Mashup tool for faculty to organize course content.	3/5/2014 9:22 AM
9	It integrates with institutinal CRIS via a home grown application.	3/5/2014 9:14 AM
10	LDAP for authentication, Authority Control	3/5/2014 9:11 AM
11	Blackboard. We have designed a custom integration for faculty to reference content in DSpace. Drupal. Our library website is in Drupal. We intend to create workflows to bridge between the 2 systems. Omeka.	3/5/2014 8:54 AM
12	I'd like it to work with OJS, which I believe it does. We will just have to configure SWORD to allow OJS to deposit published articles into dspace. I'd also like to integrate it better with our Summon Discovery service, but I am not sure how to enable Summon to access only the collections we want it to access. I'd like to see our faculty and departments pulling their publication information out of our repository to populate their web pages. Right now this is not happening and I don't think we have the expertise to enable it. Generally, I'd like to see other web applications on campus pull items dynamically from our dspace instance.	3/5/2014 8:46 AM
13	It should integrate with CRIS systems and library catalogs	3/5/2014 8:44 AM
14	Xerxes/Summon as a source of data via OAI-PMH, search in Aleph OPAC as a source of data via Solr, in SFX as a source of data via SRU/SRW (will migrate to Solr, though), in VuFind as a source of data via OAI-PMH, LDAP and Shibboleth as a SP, with SHERPA/RoMEO, Scopus, Web of Science as a data consumer, with DERS OBD (research bibliography and research reporting) as a data consumer, with IS/STAG as a data consumer (SIP import)	3/5/2014 8:10 AM
15	Should integrate with Omeka and Contentdm. Clean integration with Omeka especially would allow us to use the great bitstream management and curation tools in Dspace and get good presentation and user interaction with Omeka.	3/5/2014 8:07 AM
16	It would be great if DSpace could integrate with Open Refine such that global metadata changes could be made in Open Refine and rewrite item metadata to include the changes.	2/28/2014 4:02 PM
17	Our DSpace harvests from our eduCommons-based OpenCourseWare through OAI. We are also working on integrating our CRIS (Grec, a CRIS used by some universities in Catalonia) with DSpace. The idea is to submit reasearchers' papers from Grec to DSpace via SWORD.	2/26/2014 2:58 AM
18	Digital Measures would be nice. So would the course-management system (for student work). Dropbox, Box.net, and Google Drive for easy transfer of materials – maybe also SlideShare, same reason.	2/25/2014 2:43 PM
19	No	2/25/2014 2:16 PM

DSpace Vision survey

20	Ex Libris Primo. This is a solution for discovery and delivery of local and remote resources, such as books, journal articles, and digital objects. It's used as the central solution to search resources of our university library.	2/25/2014 5:43 AM
21	Have been discussing using CONTENTdm and/or Omeka as well as DSpace. DSpace is a great repository, but not so great at providing context and relationships between materials. Not sure what the integration would look like...similar handles/unique ids? Reuse of metadata?	2/24/2014 3:30 PM
22	We are planning to integrate with ExLibrisPrimo (via Aleph). We'd like to integrate with WordPress and other standard CMS tools so that our Dspace collections can be made visible through other platforms.	2/19/2014 3:39 PM
23	CRISin (National Norwegian CRIS). The Common Student System (National study administration system).	2/19/2014 3:17 AM
24	We will be exploring integrating DSpace with the university the Student Management System and Research Management System. Integrating DSpace with OJS, where article metadata is submitted from a journal into DSpace.	2/18/2014 7:56 PM
25	Joomla	2/17/2014 5:01 AM
26	SNRD MinCyT	2/14/2014 6:49 PM
27	Plan to integrate with Koha ILS software	2/13/2014 9:24 AM
28	Symplectic Elements (Research Outputs Management System)	2/12/2014 5:15 PM
29	Primo for enhanced discovery; currently DSpace is harvested by Primo Dataverse for integrated submission SWORD integration with Sharepoint	2/11/2014 4:07 PM
30	Our repository is harvested by several other platforms eg: RePEc and researchnz. An authority control system for author names would be very useful.	2/10/2014 1:51 PM
31	I would like our local annual review system for faculty productivity to be integrated with dspace--this is more of an institutional problem than a technical one.	2/10/2014 9:21 AM
32	Archivematica (https://www.archivematica.org/wiki/DSpace_integration)	2/6/2014 5:00 PM
33	Archivematica	2/6/2014 2:13 PM
34	It integrates with our Research Management System.	2/5/2014 9:26 PM
35	http://experimental.worldcat.org/fast/ - FAST	2/5/2014 10:22 AM
36	Should integrate with next gen library systems in future	2/5/2014 6:00 AM
37	Integrated with Vu-find search	2/5/2014 5:56 AM
38	TYPO3 (for integration in our institutional website)	2/5/2014 4:38 AM
39	PURE (CRIS): Submission of institutional publications DataVerseNetworks: linking between publications and research data Google Analytics: Presentation of use of publications and aggregations of publications Europeana HATHI Trust Google Scholar Preservation software for identification and validation (JHove, DROID etc.) SFX Knowledge Base: connector for ingest DSpace DBPedia Author ID systems (ORCID, ResearchGate)	2/5/2014 3:26 AM
40	British Library harvest using their custom tool over OAI-PMH Integrate with our CMS and other sites via RSS - we use opensearch to display a feed of work for a particular author or research group.	2/5/2014 3:21 AM
41	With our CRIS	2/5/2014 2:51 AM
42	VIVO provides a link within its records to records in DSpace	2/4/2014 9:02 PM
43	Minisis, for archives management.	2/4/2014 2:41 PM
44	It doesn't at this time.	2/4/2014 1:05 PM
45	Would be nice if Omeka could pull from DSpace like it can from Fedora	2/4/2014 12:52 PM
46	ETD management could be better. We are looking at VIREO but no plans to use now. Ingesting research data a problem. Will likely need to build a sword interface to get custom metadata.	2/4/2014 12:44 PM
47	Repository should have mechanisms to integrate with digital preservation solutions (DuraCloud, MetaArchive, DPN), and should integrate with Elements and Vivo (as DSpace can). It would be nice if it integrated with SHEPRA/RoMEO via its API.	2/4/2014 12:37 PM

DSpace Vision survey

48	Our DSpace is integrated with Vireo	2/4/2014 12:27 PM
49	Yes, we are integrated with Ex Libris Primo	2/4/2014 12:13 PM
50	Symplectic feeds articles to DSpace, but very low use	2/4/2014 11:55 AM
51	Tematres - To vocabulary control	2/4/2014 11:30 AM

Q11 DSpace currently provides many features, either out-of-the-box, through optional extensions, or by integrating with third-party services. The following page lists a number of features. For each, please indicate how important each of these is to you. Please note that not all of the following features are currently available in DSpace.

Open Access status tracking and compliance checking	51.14% 45	43.18% 38	5.68% 5	88
Standard repository machine interfaces (e.g. OAI-PMH, SWORD v2, ResourceSync)	79.78% 71	17.98% 16	2.25% 2	89
REST API for building external applications	54.44% 49	42.22% 38	3.33% 3	90

Q12 What other features should DSpace provide?

Answered: 22 Skipped: 96

#	Responses	Date
1	perhaps better functionality for archiving web sites	3/7/2014 11:33 AM
2	Linked Data functionality Configuration files not just for Google Scholar but other search engines whether academic, generic, image, etc. Ability to handle compound objects Global editing and preview in the Admin interface to edit multiple items and/or collections.	3/6/2014 10:14 AM
3	1. Plugin for different digital content viewer in the browser without download. 2. Ability to restrict group or individual access to certain collections or whole repository 3. Ability to allow only selected groups or persons access to collections.	3/5/2014 3:56 PM
4	User interface more friendly and customizable.	3/5/2014 1:37 PM
5	1) Facilitate bibliographic citation: - display in the record a bibliographic citation for the item (as seen in bibliographic databases); done on the fly sometimes I believe from field content in the item. - facilitate RIS exportation (EndNote, etc.) 2) Feature that allows emails to be sent to the person submitting a document, once they've submitted and ideally after each step of approval in the workflow. People are used to have an automatically generated email of what they have just done when shopping online, doing other types of transactions online or submitting a request for information on a web site. The confirmation on the web page in DSpace after submission is not sufficient; also, even though we tell students "no news is good news" in the case of thesis submission in DSpace, this is not very reassuring (and not always true). If there could be an automatically generated email at each step ("we confirm you have submitted the following document to this collection..." / then "your submission has been reviewed by faculty / departement and has been approved; publication will occur after your degree has been granted (3 months)", etc.). All that info is on our help pages but people don't read them and in addition they phone because they want to know if THEIR submission was ok. With 1200 theses and dissertations a year, it keeps us busy. :-) 2) Names of collections: make it possible to have different versions of the names depending on the context (i.e different representations of a same object). Example: under the community Faculty of Music, being able to have a collection that simply is called "Theses and dissertations". This is not currently possible since when one wants to submit to DSpace, the list of collections presented in the drop down menu is not hierarchically presented (communities and collections); not having the name of the community in the name of the collection would result in having 50 collections in the drop down menu with the same name ("Theses and dissertations"). This forces us to have very long names for collections.	3/5/2014 10:07 AM
6	A catalog-like structure which allows for internal relationships between name variants of the same entity.	3/5/2014 9:18 AM
7	ESPECIALLY: "Relationships between objects (e.g. Author items as Authors of an item rather than textual metadata)"	3/5/2014 9:04 AM
8	Easy ingest of items via PMID or ISI number; Mendeley button;	3/5/2014 8:47 AM
9	Re-filiation of hierarchical structure via administrative user interface for use in reorganizations.	2/27/2014 12:43 PM
10	I'm currently working on a grand new feature, but I don't want to talk about before it's working.	2/25/2014 5:47 AM
11	configurable licencing model integration with standard statistics provider (ga, ...) relationship visible in UI of items (replacedby, ...) consisten metadata schema CP should be really control panel and not only information panel curation for reviewers conform to data protection (EU, ...) typeahead/suggestions in submission workflow MLT of items improve logging of exceptions regular complete reports improve provenance up-to-date UI framework (most of the items had to be implemented by lindat.mff.cuni.cz/repository)	2/19/2014 1:22 AM
12	Relationship between objects. Space to bundle administrative correspondence or preservation related to items. Re: Format identification and reporting -- use an international registry to identify formats and extend the management of objects (for example PRONOM and the tool FITS)	2/18/2014 7:57 PM
13	-	2/14/2014 6:54 PM

DSpace Vision survey

14	Should have feature to install very easily and import and export data in Excel/CSV formats without many steps	2/13/2014 9:30 AM
15	The more that I can do without bugging my tech team, the better. I know my way around most content management systems (Joomla, Drupal, WordPress, Content5, etc). But I don't know how to install and back them up ... I could learn, WordPress is easy enough, but I don't have the time. So, I'd be glad to do some of the tasks that I have to rely on others to do ... (move collections, convert a community to a subcommunity, etc) ... if these were (documented) options in the user interface.	2/10/2014 9:30 AM
16	- DataSet archiving - Semantic search -Easy integration with a CMS for editing Info/news for Repository/Community/Collections	2/10/2014 7:05 AM
17	Option for tagging and social media Ability to notify "Author" on use of their deposited materials - Monthly/Quarterly updates - opt in out Way for Administrator to view failed emails and adjust. Easier Administrative reporting of statistics. I'm a new user so some of these features may be available and I am just not aware of them yet.	2/5/2014 10:30 AM
18	You should just stop developing it. Start fresh. The questions above are all must haves and loads come for free if you just choose another system architecture.	2/5/2014 5:57 AM
19	Fully support of REST API! perhaps with Oauth authorisation Social Media integration	2/5/2014 3:29 AM
20	authorized users should be able to create their own communities/collections. users should log in and be able to submit work prior to being authorized (this is a strange workflow that users do not expect give most web-based systems). users should be alerted to their stats, via email. browse by type (articles, data, books, etc.). tools like mendeley can pull metadata from a pdf...so should DSpace. DSpace should federate all instances of DSpace (maybe by country)...like Digital Commons does.	2/4/2014 1:17 PM
21	The biggest single issue is the REST api, which should be allowed to evolve as it is put into real use. We expect a number of DSpace features to become essential but 'headless' services over time. The REST api is seen as the start of that journey. The current UI is seen as a Librarian's view of how things should be deposited and we hope to adapt to a more user-oriented view now we can use the api.	2/4/2014 12:02 PM
22	Asset (item) accounting; i.e., acquisition cost. Our collections are historic publications, currency, statuary (ancient and modern). We really do need to keep track of what something cost and ongoing maintenance costs. Be nice to have a built-in capability rather than adding metadata fields and programming.	2/4/2014 11:48 AM

**Q13 What does DSpace mean to you?
Please choose words that describe the
services it provides, and the way you use
it to offer services. Please enter any words
that come to mind when thinking about
DSpace!**

Answered: 60 Skipped: 58

#	Responses	Date
1	Open Access	3/7/2014 4:20 PM
2	A digital platform to ingest, preserve, and publish collections and to provide a variety of dissemination interfaces.	3/7/2014 2:47 PM
3	archive for digital material - scholarly record and institutional memory. Part of the mechanism for open access scholarship.	3/7/2014 11:36 AM
4	Long-term storage. Preservation. Discoverability of holdings.	3/7/2014 7:48 AM
5	Flexible, simple, robust, secure	3/6/2014 2:28 PM
6	DSpace in our mind is a digital library that house many different things from scholarly works to digital collections. As a platform we want it to be a robust digital asset management system that not only provides great functionality for the user (interface, searching and browsing, full item metadata records not showing Dublin Core but the display labels like in the submission forms, style and branding) but also the administrator (advanced preservation services (fixity checks, format migration, AIP packaging, bit corruption or loss detection, PREMIS) and management tools (global editing, global deletion, batchupload, ability to query across all collection for quality control checks, ability to create templates within DSpace instead of the input-forms.xml file). Basically our vision is to get as close as we can to a n all-in-one platform.	3/6/2014 10:33 AM
7	repository metadata access integration	3/6/2014 9:39 AM
8	Flexible, access control	3/6/2014 8:34 AM
9	Persistent Warehouse Content Management	3/5/2014 4:00 PM
10	Community; open access; scholarly communication; connection	3/5/2014 3:10 PM
11	Awesome. Reliable.	3/5/2014 1:42 PM
12	repository; open access; scholarly communication; impact	3/5/2014 10:54 AM
13	Easy to use, relatively simple, not as complex as a catalog Look and feel could also improve, although dont know yet 4.0 version in practice	3/5/2014 9:23 AM
14	DSpace is becoming a mission critical application for us. We maintain and eclectic mix of collections and through them provide critical services to several programs on our campus. Being able to manage our local instance also raises the profile of the library on campus. It provides us with visibility and people see us as having a useful skill set. Because of our history with DSpace, we were able to convince various academic programs and our University IT folks that it makes sense for the library to manage the Open Journal Systems (OJS) installation.	3/5/2014 9:00 AM
15	Good platform with lots of features. Good technical community. Just-right level of complexity.	3/5/2014 8:57 AM
16	Archiving of bitstreams and metadata. Presentation of items views. The OAI-PMH is important for getting our metadata to national and international service providers.	3/5/2014 8:51 AM
17	data source with great integration options	3/5/2014 8:14 AM
18	Nice to know that it's always up, and easy to search.	3/5/2014 8:07 AM

DSpace Vision survey

19	Robust (crashes extremely rare); archival strength from our point of view. Too bad it seems that MIT's "Digital Sustainability Lab" is moving away from DSpace as an archival platform: http://libraries.mit.edu/digital-archives/integrating-tools/	2/27/2014 12:52 PM
20	great way to locate digital open source and citation information in one place for our collection.	2/25/2014 4:08 PM
21	Open Access, promoting our research	2/25/2014 2:23 PM
22	DSpace provides a solid ground to build repositories. It provides a lot of features combined with a open source approach that allows one to add whatever he needs. While doing so it stays maintainable and supports you with a great documentation.	2/25/2014 5:50 AM
23	I like to think of DSpace as the boring old Hollinger boxes that our archives are stored in. That is great for management and on-site access. Then, we can also have 'exhibits' via CONTENTdm or Omeka that give context and information as well as the items themselves.	2/24/2014 3:35 PM
24	The version we're using (1.7) is simple and robust.	2/19/2014 3:51 PM
25	Essential. Research-oriented.	2/19/2014 3:57 AM
26	DSpace is an important platform supporting our Open Access strategies.	2/19/2014 3:30 AM
27	repository	2/19/2014 1:24 AM
28	DSpace provides a straight forward platform to manage and provide access to research outputs.	2/18/2014 8:00 PM
29	A digital library platform used by an impressive number of institutions all around the world	2/17/2014 8:43 AM
30	Visibility- Free - Knowledge	2/14/2014 6:56 PM
31	DSpace highly flexible in terms of content management and deployment, versatile, standards-based, robust and finally user friendly in terms of content discovery	2/13/2014 9:30 AM
32	persistent URLs, Open Access, preservation, maximizing research visibility,	2/12/2014 5:23 PM
33	DSpace has been a stable and reliable platform for our institutional repository since 2006. It lacks a bit in terms of a user experience but essentially it provides everything we need.	2/11/2014 4:13 PM
34	Dspace offers a very stable service for housing some of our digital collections (eg: exam papers, theses, working papers and some datasets). Dspace has a community of users which makes it easier to troubleshoot problems and learn from other users experiences. We use Dspace to share our thesis collection with a national aggregator and ingest exams papers into our discovery service.	2/10/2014 2:02 PM
35	open, out of the box, preservation, increased access	2/10/2014 9:45 AM
36	DSpace means our repository.	2/10/2014 9:31 AM
37	Dissemination	2/10/2014 7:06 AM
38	Robust platform that allows for customizations; centralized repository of unique and influential institutional research; discovery tool for internal/external researchers, students; network for researchers; research management tool; platform for enhancing global reputation of the university; recruitment tool; publishing platform	2/6/2014 1:06 PM
39	Fedora	2/6/2014 8:18 AM
40	Preservation Access Easy to use Stable and reliable	2/6/2014 1:53 AM
41	Trusted, supported, community, longevity	2/5/2014 9:30 PM
42	Open Source Open Access Better dissemination of institutional knowledge and output	2/5/2014 10:32 AM
43	We use it to showcase our digital collections. Works well for collections with one type of material, e.g. photograph collections.	2/5/2014 6:03 AM
44	hate, frustration, insanely stupid metadata handling, inefficiency	2/5/2014 5:58 AM
45	DSpace has been great for our institutional repository - thanks to all involved.	2/5/2014 5:02 AM
46	Complicated	2/5/2014 4:30 AM
47	DSpace is central in our repository architecture. We use it not only for our institutional repository, but for the archiving and preservation of digitized books, maps, educational material and annotations of special collections as well. Also, it play a vital role in making content harvestable by machines (service providers).	2/5/2014 3:38 AM

DSpace Vision survey

48	An digital archive which I can control our digital collections. It's too a great window open to the world.	2/5/2014 3:03 AM
49	It has evolved from being my university's institutional repository –and therefore the "public face" of its research outputs– to more of a back-end function, with VIVO now providing a more holistic view of researchers and their outputs.	2/4/2014 9:09 PM
50	A professional, purpose built yet flexible repository for scholarly information	2/4/2014 2:44 PM
51	infrastructure, lots of developer support	2/4/2014 1:22 PM
52	DSpace is about easy access to our repository (digital collections and scholarly work). It allows us to showcase our materials in one central location in an easy manner—we don't have to do a ton of development to get what we want out of the software.	2/4/2014 12:57 PM
53	I've worked at two institutions that have used DSpace for their IR service and the software makes it easy to create a platform to manage digital objects. I know the software very, very well!	2/4/2014 12:55 PM
54	efficient way to disseminate scholarship globally	2/4/2014 12:49 PM
55	availability simplicity security	2/4/2014 12:41 PM
56	We market DSpace as an online archive. It's a place for users to share their work, get persistent URLs they can use, and have preservation of those digital objects handled by the library.	2/4/2014 12:33 PM
57	Facility to users during submission of itens of collection.	2/4/2014 12:31 PM
58	DSpace is the Librarians view of how digital objects should be looked after. While some of the values are shared with end users, few are delighted by the user experience. When, how and which metadata gets populated should be subject to ongoing review and experimentation.	2/4/2014 12:05 PM
59	Access, safety, persistent, preservation,	2/4/2014 11:56 AM
60	Reliable. Capable. Customizable.	2/4/2014 11:50 AM

Q14 What is your biggest pain point in using DSpace?

Answered: 73 Skipped: 45

#	Responses	Date
1	It's relatively complex to install, customize, and manage. Improvements here would lower the total cost of ownership.	3/7/2014 4:20 PM
2	From a features standpoint, DSpace has been ill suited to hierarchical content. From a technical standpoint, the software has been bug-prone.	3/7/2014 2:47 PM
3	maybe that the whole system feels like 2002 rather than 2014.	3/7/2014 11:36 AM
4	We have limited (external) IT support; the more features we can get into the UI, the better. e.g. field visibility during submission/workflow and publication type based submission forms	3/7/2014 10:33 AM
5	Upgrading.	3/7/2014 7:48 AM
6	Non-native deposit form (SWORD) that cannot accept special characters (i.e. subscripts, scientific formula etc.).	3/6/2014 2:28 PM
7	Not able to handle compound objects No built-in media for viewing documents, video, and listening to audio No advanced preservation services (ability to capture administrative metadata using PREMIS, format migration, bit corruption or loss detection to name a few) No way to create metadata templates within DSpace and not the input-forms.xml file	3/6/2014 10:33 AM
8	Lack of bulk import features via the UI	3/6/2014 9:39 AM
9	Unable to create input forms or batch load records through user interface	3/6/2014 8:34 AM
10	Content Management Branding Content Restricting access to collections by default	3/5/2014 4:00 PM
11	Search function	3/5/2014 3:10 PM
12	Batch uploading	3/5/2014 1:42 PM
13	I would say marketing DSpace's user interface is our biggest pain point. With faculty, especially, it's near-impossible for us to compete with commercial services like Academia.edu, in terms of easy uploads and submissions, and the value proposition is pretty poor for them—we can make some statistics available at the item view, but we can't create pretty summaries of all their articles within our community unless we pull that data and generate it for them (which we do, and it is a significant manual effort).	3/5/2014 9:34 AM
14	On and off performance and time-out problems and authentication oddities. The fact that you need to log in every time you wish to upload something. The lack of solution as yet to integrate VIVO-like templates for authors and linking them to works and CRIS. The lack of complex advanced search options.	3/5/2014 9:23 AM
15	It's difficult to upgrade: we have to pay to have our site upgraded. We are always concerned about losing stats and theme customizations and we are always very concerned about how each version plays with Oracle. Also, DSpace is somewhat of a silo. I wish there were relatively easy ways for faculty and staff to pull information from DSpace into their web applications.	3/5/2014 9:00 AM
16	It takes a good deal of work to leverage all of the features that are available.	3/5/2014 8:57 AM
17	Batch editing. We now do most of it through custom scripts that work directly on the database. When another system wants to update an item (as happens in synchronizing with Pure), we lose all our edits and have to run those scripts again.	3/5/2014 8:51 AM
18	Authority control, duplicate items (very hard to identify)	3/5/2014 8:48 AM
19	Ingesting content into DSpace is not intuitive and it can be devilishly hard to find materials through the search interface out-of-the-box	3/5/2014 8:29 AM
20	long build and deploy time	3/5/2014 8:14 AM
21	end user user interface and too simple object representation and display	3/5/2014 8:10 AM

DSpace Vision survey

22	Customizing the look and feel. It is WAY too difficult. We had to write our own Newspaper presentation product but would have rather used DSpace if we could have.	3/5/2014 8:07 AM
23	Lack of a robust API for querying the repository, retrieving appropriate data and building robust reports. Lack of better metadata normalization tools. Lack of authority handling for individuals and organizations. Enforced hierarchical structure for Communities/Sub-communities/Collections does not readily map to the ways that research organizations within a research and teaching institution are organized and collaborate. Thus, the way that DSpace needs to manage content internally may not be the best model for presenting the content to end-users.	2/28/2014 4:09 PM
24	Granular embargo and the management of access authorization (this has ALWAYS been a pain point, particularly when object behavior has changed with changes to this part of the system).	2/27/2014 12:52 PM
25	My biggest pain point, with difference, is making it work properly. I don't usually have problems with my production instances. Maybe because, once they are working, I only do small changes and only from time to time. The real problem I have is with testing instances. Setting up a new DSpace instance involves lots of steps, which is very error prone. Also, once it's working, it is very easy to break. Some examples of problems include: - forgetting the ROOT link in Tomcat's webapp folder - wrong permissions in directories or PostgreSQL tables. - statistics not working - lots of unchecked error conditions - indexing problems Some of them are relatively easy to spot and fix. Others take too much time, and sometimes, the only solution that works is installing from scratch. The second point would be the user interface. In one hand, the problems derived from having two user interfaces (JSPUI and XMLUI), each with different functionalities implemented. Plus multiple themes for XMLU. I see it as a big waste of developer resources. Furthermore, XMLUI is difficult to understand. And, while some things are easy to customise, some others are unnecessary difficult. The last point would be the configuration. There are too much options and files, and sometimes it's difficult to know which backend/functionality is affected by a configuration file or option. For example, if I remember correctly, config/crosswalks/QDC.properties used to affect ingestion/dissemination as well as export/harvest in OAI. But now, OAI is configured through XSLs in dspace/config/crosswalks/oai/metadataFormats/. Do they affect the exporting of items through OAI or also the harvesting?	2/26/2014 6:00 AM
26	My biggest pain point is that I am an IR manager but not technology support for the IR and the communication between us is difficult. The more that can be done on a user end level the better.	2/25/2014 5:55 PM
27	clunky interface	2/25/2014 4:08 PM
28	Usability. I can't take care of materials I can't get, and I can't get materials because people would rather jump off a twenty-story building than use DSpace -- and that includes me some days! Third-party licensing (where the person who deposits the item is NOT the person who should click through the license) is also a major pain point. I worked one place where I had to get license sign-offs ON PAPER. This is dumb and should be unnecessary!	2/25/2014 2:47 PM
29	Inability to customise simple features as a non-techy (ie from the admin interface)	2/25/2014 2:23 PM
30	The mixture of maven and ant and the long time maven needs to build DSpace.	2/25/2014 5:50 AM
31	Not enough hierarchies to handle archival collections (it's built for monographs). Template is also built for monographs, hard to explain to our stakeholders why we need other metadata, search/discover tools, etc. And hard to change the template!	2/24/2014 3:35 PM
32	User interface leaves something to be desired.	2/19/2014 3:51 PM
33	No name authorisation so end up with various versions of the same name - would be useful to be alerted to the fact that the name exists or to be offered the opportunity to select from the names already in our DSpace.	2/19/2014 3:57 AM
34	Lacking flexibility in terms of metadata management.	2/19/2014 3:30 AM
35	DSpace is usable at the beginning, as time goes by there are quite a few.	2/19/2014 1:24 AM
36	Some aspects of how DSpace was developed makes it hard to develop it for certain needs, which would be helped if we could use different features using plugins. These are the main reasons we are using Omeka for collection material and plan to use Islandora/Fedora Commons for preservation. How Embargoes in recent versions have been set prevents us using the standard DSpace to manage these, which requires us to make significant alterations.	2/18/2014 8:00 PM
37	User administration, who has access to what in Dspace	2/17/2014 8:43 AM
38	Uploading large files (>1Gb)	2/17/2014 4:09 AM

DSpace Vision survey

39	-	2/14/2014 6:56 PM
40	Installation in Linux OS	2/13/2014 9:30 AM
41	complex authorization policies at community, item and bitstream levels	2/12/2014 5:23 PM
42	It is not a compelling user experience.	2/11/2014 4:13 PM
43	Customising Dspace (changing themes and customising xml forms) requires access to the applications code. For staff without technical skills this is beyond their ability. If it were possible to do more through the web interface that would be great.	2/10/2014 2:02 PM
44	inability to easily alter hierarchical structure. once you submit to a given hierarchy (community, subcommunity, collection) it's difficult to alter, move item to a new collection.	2/10/2014 9:45 AM
45	Trying to get the tech team to make the upgrades and troubleshoot the bugs. The stats, for example, are never accurate.	2/10/2014 9:31 AM
46	Configuring all the administrative components with many .cfg xml external files: a WebGui with all administrative parameters will be nice	2/10/2014 7:06 AM
47	DSpace was initially chosen, in part, because of its robustness but it seems that this robustness has come at the cost of rigidity that makes it increasingly challenging for us to meet our changing needs, and those of our users. We have limited access to minimal in-house expertise and rely on paid development services for everything else which means that nearly every customization/configuration is costly, time-consuming and requires endless discussion, consultation, testing, delays and complicates future upgrades. It is incredibly frustrating as a person with no programming experience or knowledge who is responsible for helping people use the repository to be wholly dependent on limited access to those with programming expertise for even the simplest of changes such as the fields which display in a submission form, for example. In some cases, programmatic-based decisions create subsequent usability issues for which I have to create endless workarounds and documentation to help users and partners cope with an unintuitive UI and complicated workflows. It seems that customizations now serve to only further complicate the system rather than provide any flexibility or enhanced usability which leads our senior administrators, systems librarian, IT managers and liaison librarians to wonder why we are using a system that we are so furiously trying to bend into a shape which only partially suits our needs. All of the above means that I am spending more and more time dealing with DSpace-related issues for which I am not technically well-suited and less and less time doing advocacy, recruitment, and other service related projects to help increase uptake among our researchers and, in turn, improve resourcing. We need a platform that is more intuitive for our users and for those responsible for promoting and managing its services.	2/6/2014 1:06 PM
48	Complexity	2/6/2014 8:18 AM
49	None	2/6/2014 1:53 AM
50	Persistent identifiers are only at the item level. It would be good great if this could be at the bitstream level	2/5/2014 9:30 PM
51	There are some metadata management tasks that I would prefer were not on the systems level. For example, I would like to be able to "see" what elements are being used across collections through an administrative interface and not necessarily at the systems level.	2/5/2014 11:15 AM
52	Embargo features Custom submission pages for different communities/collections - my next big step Authority control of names and subject options for submissions. Setting up external connections - SWORDv2, OAI	2/5/2014 10:32 AM
53	Struggle with description of complex collections containing more than one type of material.	2/5/2014 6:03 AM
54	hate, frustration, insanely stupid metadata handling, inefficiency	2/5/2014 5:58 AM
55	The missing CRIS entities - add research to DSpace but can't add researcher profile or related. Know about http://cineca.github.io/dspace-cris/index.html but be useful if this was available otb.	2/5/2014 5:02 AM
56	XSLT to templates	2/5/2014 4:30 AM
57	1. It does not provide proper preservation functionality! 2. You can not describe content properly (metadata) on a Bitstream level!	2/5/2014 3:38 AM
58	If our digital collection grows, DSpace will be able to manage it?. The technical support is not enough.	2/5/2014 3:03 AM

DSpace Vision survey

59	Statistics	2/4/2014 9:09 PM
60	Maintaining and administering workflow management,	2/4/2014 2:44 PM
61	Statistics- cant seem to get what I want - need to ask the developer to run reports. Not very visually pleasing or interactive - most dspace instances i have seen look "dead". Would be nice to be able to pick nicer themes for the user interface.	2/4/2014 2:35 PM
62	users dont like uploading to it. too hard, too many steps. We are always trying to find a way around it...so they dont have to use it. For example, currently we a user logs-in, DSpace send us (admins) an email, we reply with "what do you want to do," they respond "I want to do this," we create a new collection, assign them permissions...and finally email them to say: you are ready to go! Inevitably...they have lost interest, moved on, and do not upload a thing. Instead...we need them to give us their "thing" and sign a deposit agreement. We do this using a google form that authenticates with shib and they email us the file. DSpace should make this process easy...like posting to YouTube.	2/4/2014 1:22 PM
63	The embargo feature	2/4/2014 1:14 PM
64	Batch ingesting--we allow our departments to upload but they cannot batch upload. As such we have to have the files and metadata sent to us and do it. Batch uploading on the user interface would be an excellent addition!	2/4/2014 12:57 PM
65	Not being able to upload a spreadsheet containing metadata and links to files on a web server to batch upload records and their associated files. Not being able to robustly manage complex digital objects such as scientific datasets.	2/4/2014 12:55 PM
66	searching doesn't seem clean maybe need to reindex	2/4/2014 12:49 PM
67	Lack of/poor versioning. No data integrity/allows metadata mutability -- it does not log changes to metadata, which creates problems when you want to use the metadata in other systems.	2/4/2014 12:41 PM
68	No one wants to use the submission process. Departments all around campus are pressed for staff and no one can spare someone to do the data entry required to get items into DSpace. An easier batch uploading process (through the user interface) or an extremely streamlined submission process would be very helpful.	2/4/2014 12:33 PM
69	- delay during the submission of exchanging forms; - bad interface presentation (need CSS); - other detached typology from the communities and subcommunities; - statistics monitoring including data types, time, reports with access available to communities insert css	2/4/2014 12:31 PM
70	User apathy and user experience	2/4/2014 12:05 PM
71	cannot batch download; doesn't handle large datasets very well (browser will time out in either upload or download); batch ingest function requires command line scripts; theming is not easy to do; doesn't handle restricted items/collections very well; assigning access restrictions is clunky; cannot hide collections very easily; cannot hide specific metadata/collection metadata from webcrawlers; doesn't handle images very well (we've gotten multiple requests for a light-box type feature for images);	2/4/2014 11:56 AM
72	The need to write somewhat complex software to accomplish relatively simple tasks.	2/4/2014 11:50 AM
73	Users do not like submitting items. The UI has problems that keep coming up in usability tests - for example two search boxes on the home page. The UI needs to be simplified and streamlined (e.g., one search box, no facets on the home page, etc.)	2/4/2014 11:26 AM
