# Moving DSpace to a fully-featured CRIS System

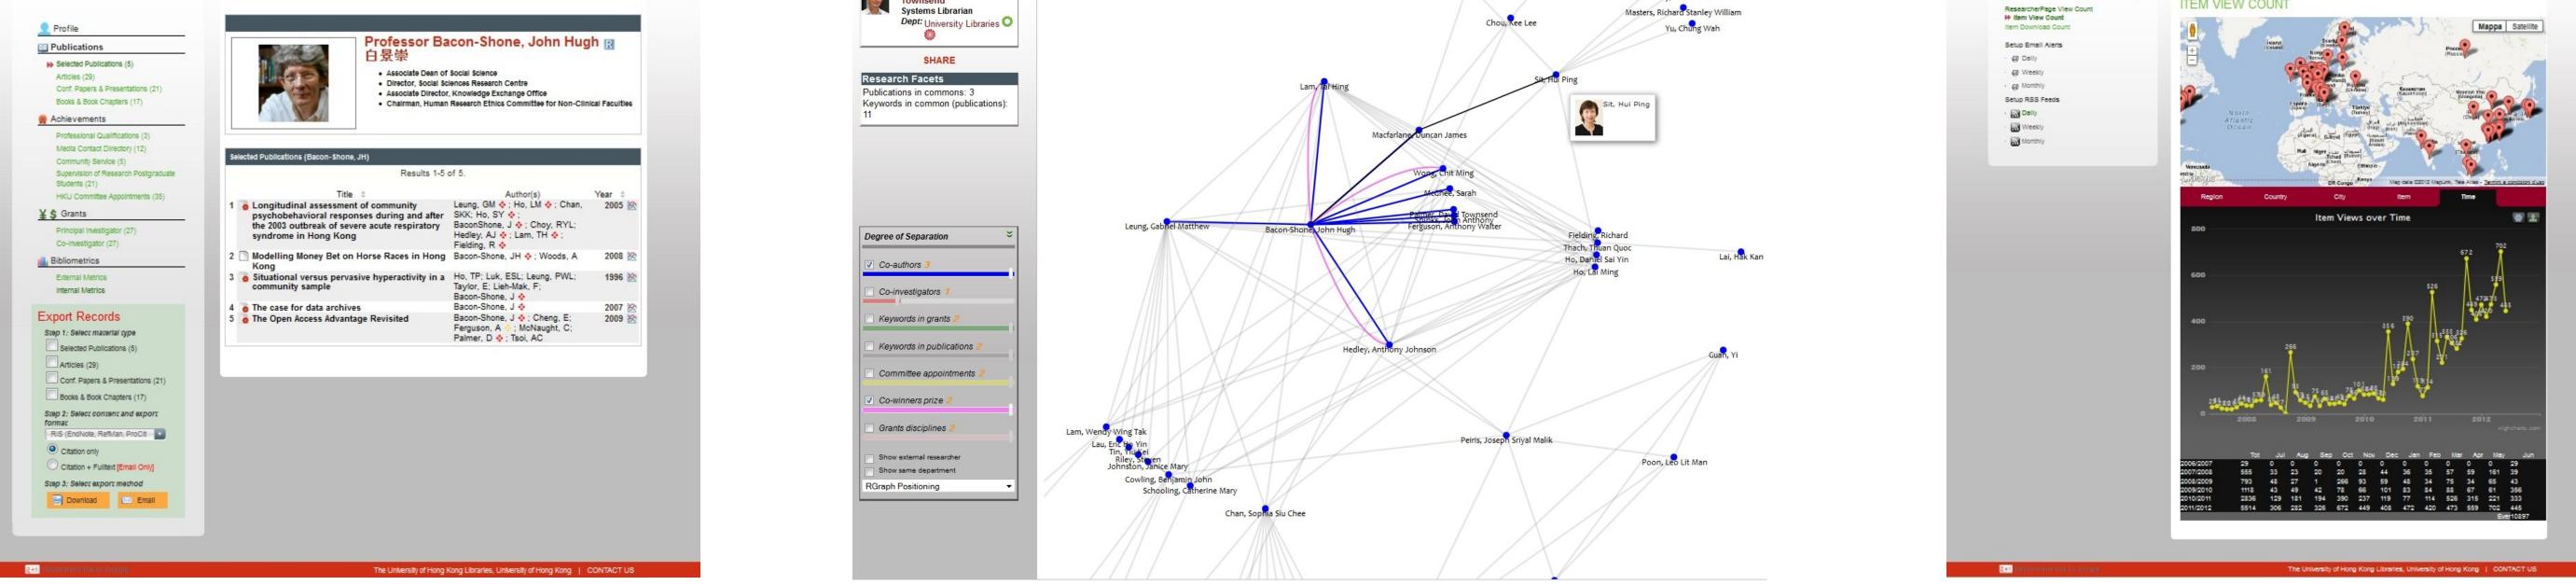

Bollini, Andrea  $^{(1)}$ ; Lo, Chun-yue  $^{(2)}$ ; Mornati, Susanna  $^{(1)}$ ; Palmer, David T  $^{(2)}$ ; Pascarelli, Andrea  $^{(1)}$ 2: The University of Hong Kong 1: CILEA, Italy

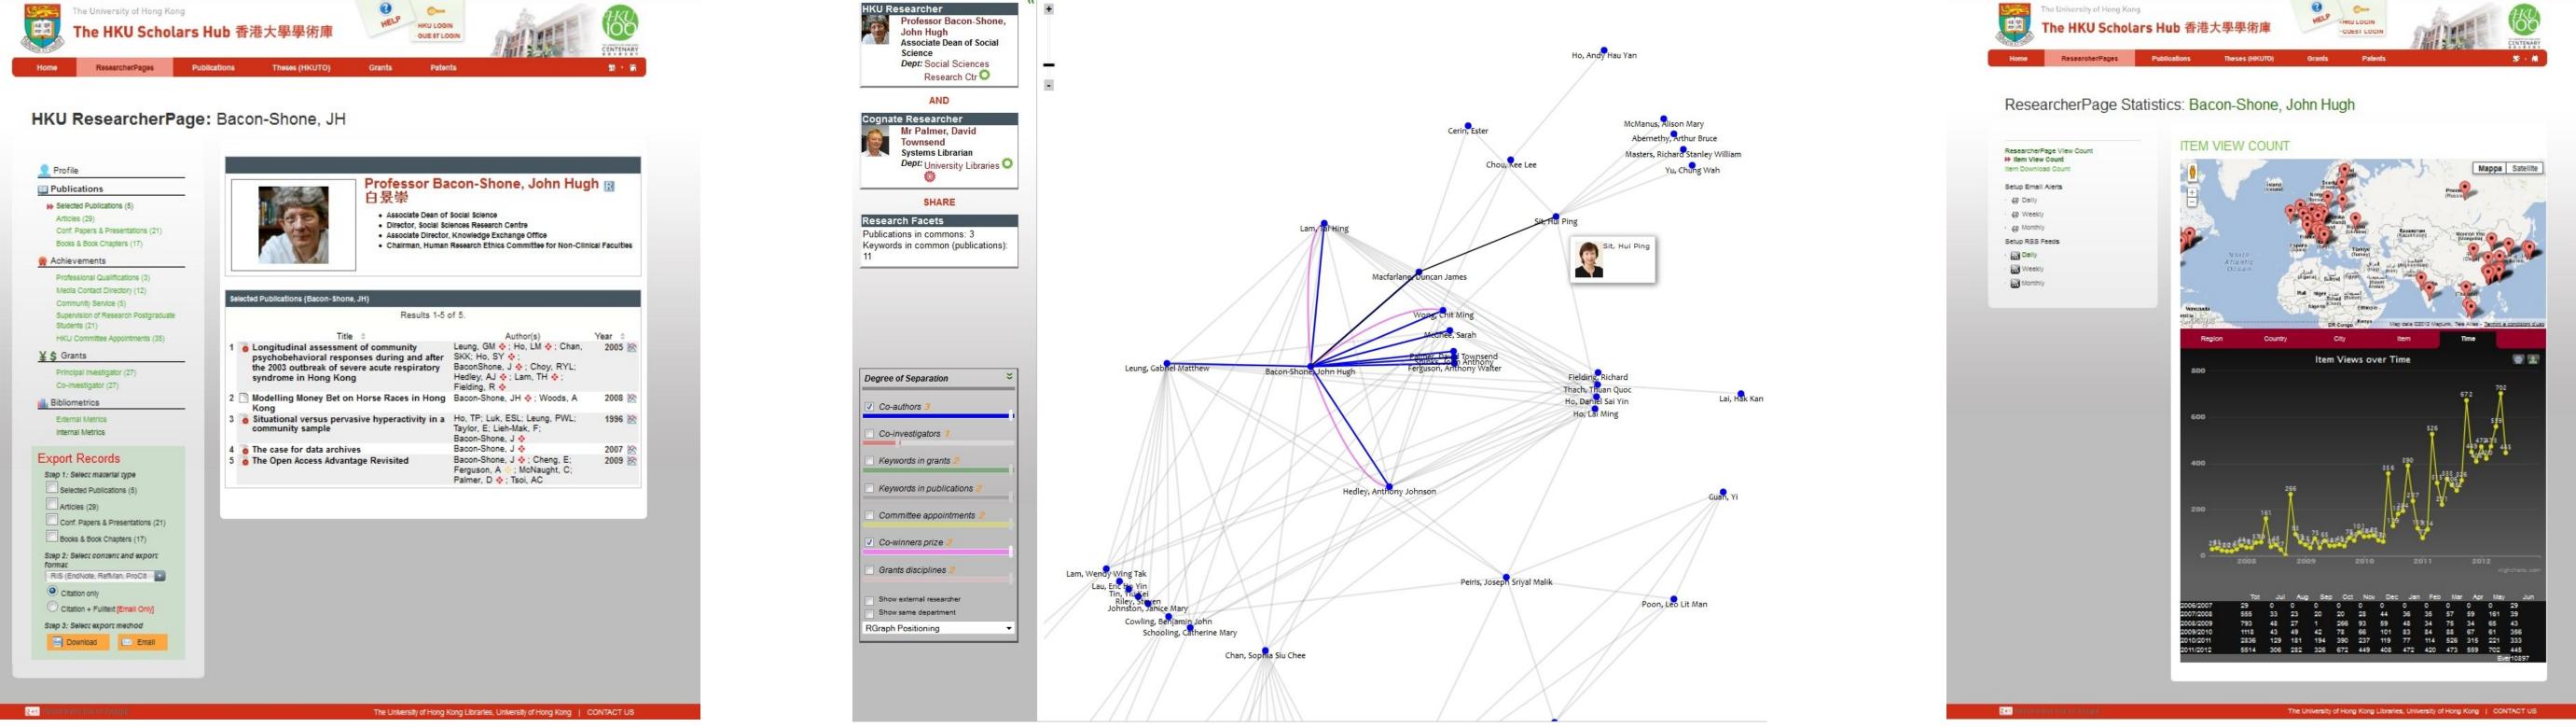

Publications are very important indicators of university research output, though they are only one of the elements that need to be exposed and evaluated in order to assess performance and impact of a university. Starting from 2009, The University of Hong Kong (HKU) began to extend its IR, the HKU Scholars Hub (the Hub), to reflect these considerations. The Hub manages data about publications, research activities, grants, awards and many other different types of research information, to be shared (HKU's "Knowledge Exchange") among its varied communities.

### Maximize exposure & discovery: Improve the quality of your metadata: Provide Services to the researchers: Online CV, with export of publications in Researchers (experts) Author name disambiguation several formats ► Projects Manage name variants (also cited as) Select lists of publications Patents Associate authors, related project, event Hide publications, projects and details

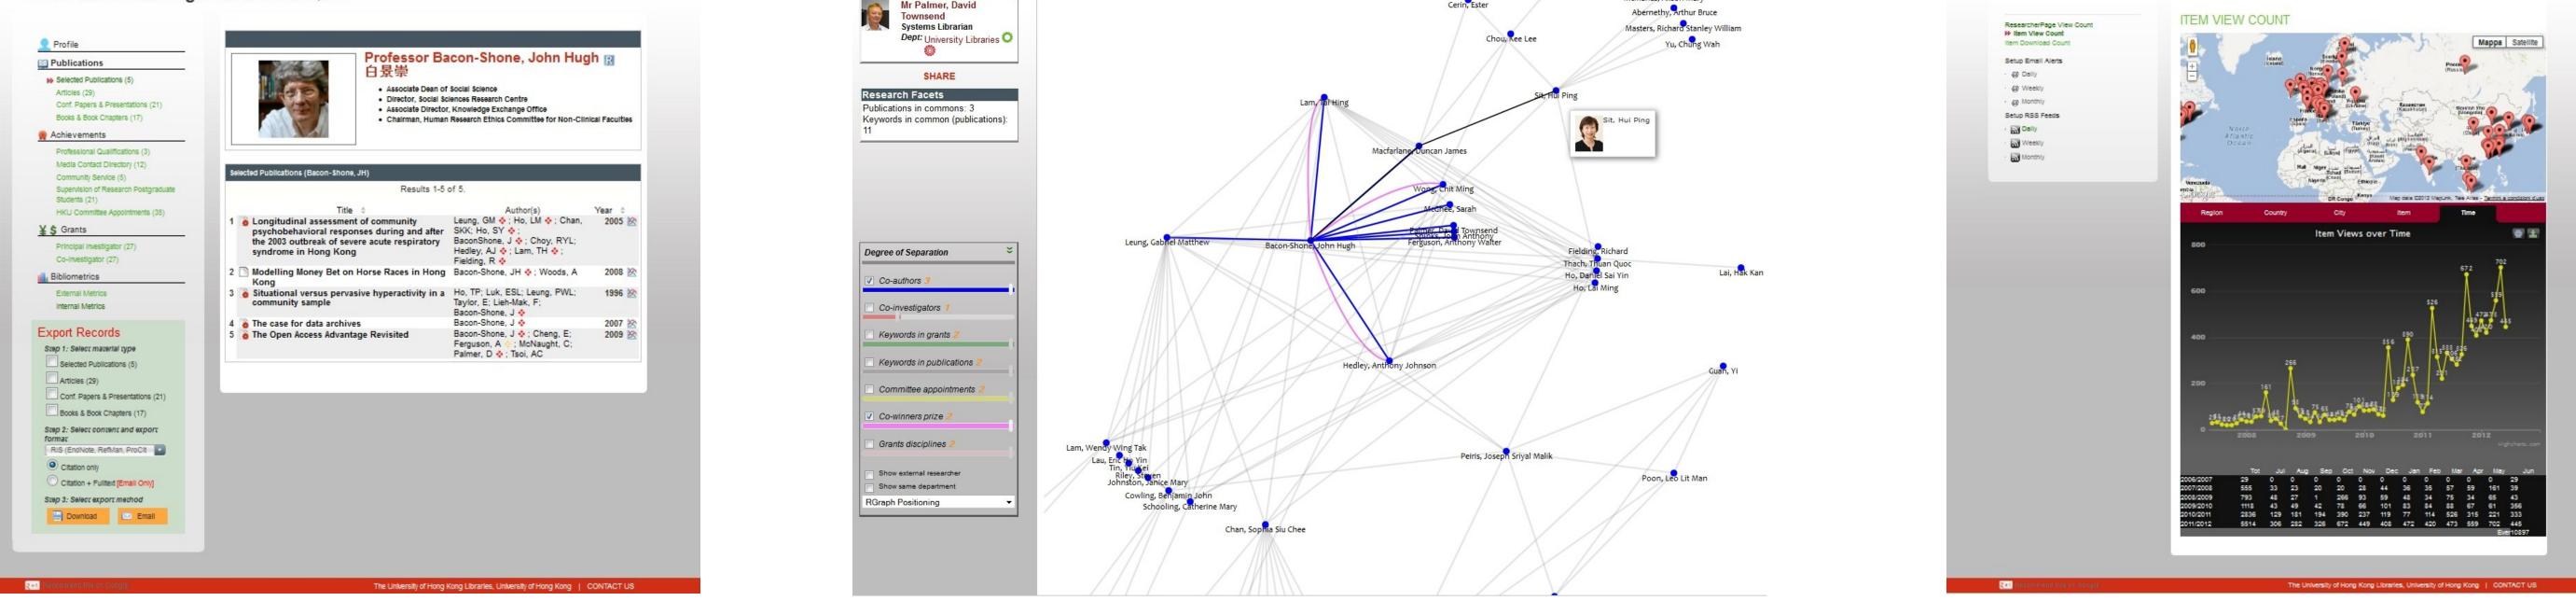

- Equipment and laboratory
- Services
- Events
- Researcher groups & Organization Units
- to items using friendly autocomplete
- Authors can claim/disclaim publications from previous import
- Reduce duplication, also co-authors can see submissions in progress in their workspace in real time
- from one's profile
- Collect additional information directly from the researcher
- Author Statistics with alert (RSS & email)
- Bibliometric Indexes
- Network visualizations and metrics

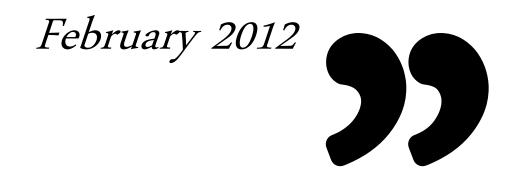

Many thanks for your works!!! Based on information of my [ResearcherPage], I was chosen as an editor for a new book "Tumor Suppressor Genes" last year.

- An HKU author

## Technical aspects:

- Extensible data model: add fields and relations without writing code
- Automatic editing & presentation of custom fields and relations
- Ability to customize jsp fragments to meet special needs
- Up to date technologies: SpringMVC/JSP2.0, Hibernate, SOLR
- Import/Export from XML
- Webservices SOAP for data access with granular access-control
- Open Source Addon: dspace-cris module!

**DSpace-CRIS** can provide the missing features in your Repository!
