Fedora Camp offers everyone a chance to dive in and learn all about Fedora 4. Training will begin with the basics and build toward more advanced concepts—no prior Fedora 4 experience is required. Participants can expect to come away with a deep dive Fedora 4 learning experience coupled with multiple opportunities for applying hands-on techniques working with experienced trainers and Fedora gurus.

Where

Butler Library
Room 523
Columbia University
535 West 114th Street
New York, NY 10027

Accommodations

Please visit the [Columbia University Travel Portal](#) for Preferred Hotels. Click on Hotels (left side) -> Preferred NYC Hotels for a complete listing. Participants are responsible for their own accommodations.

Directions

The Butler Library is at the 116th Street subway station on the Number 1 subway line. It is on the main campus; walk to the middle of campus at 116th Street and make a right. 203 Butler is on the lobby level of the building, pass the guard desk, make a left and go straight.

Please see [this page](#) for directions.

Parking

Please see [this page](#) for parking information.

When

28-30 November 2016

Preparations

The camp will include several hands-on sections using a Fedora 4 virtual machine image, so please follow these instructions to get the VM up and running on your laptop *before* the workshop.

NOTE: The VM uses 2GB of RAM, so you will need a laptop with at least 4GB of RAM to run it. Depending on your laptop manufacturer, you may also need to enable virtualization in the BIOS.

1. Download and install [VirtualBox](#)
2. Download and install [Vagrant](#)
3. Download and unzip the [4.7.0 release of the Fedora 4 VM](#)
4. Using a Command Line Interface, navigate to the VM directory from step 3 and run the command: `vagrant up`
 - a. Note that this step will take a while as the VM downloads and installs a full virtual environment
5. Test the VM by opening your web browser and navigating to: <http://localhost:8080/fcrepo>
 - a. The administrator username/password is `fedoraAdmin/secret3`
6. Turn off the VM by running the command: `vagrant halt`

We will also be making use of the SSH command - if you are running Mac OSX or Linux you can already run this command, but if you are on Windows you will need an SSH client like PuTTY.

Agenda/Presentations

28 November

Time	Activity	Presenter(s)
8:30-9:00	Registration and Light Breakfast	
9:00-10:00	Welcome and Introductions	All
10:00-10:30	Fedora Overview	David Wilcox
10:30-11:00	Break	
11:00-12:00	Introducing Fedora	David Wilcox
12:00-1:30	Lunch (provided)	
1:30-2:30	Fedora In-Context: Front-Ends	Nick Ruest Diego Pino Navarro Adam Wead
2:30-2:45	Break
