

# More Functional AUDIT Datastream

1. More functional AUDIT datastream
  1. API Endpoint to access the stream
    1. Currently no good way to access the Audit information.
  2. PREMIS support
    1. More information in the Audit DS would provide better direct support.
    2. For example, Islandora MS actions are recorded in a separate file, but there is no easy way to get that information into the Audit DS.
  3. This could also help Fedora to build a TRAC complaint repository.
