

Images

- Northwestern and DIL: One large compound object for image data streams and a sibling object containing VRA Work type metadata
 - DELIV-OPS datastream stores crop information
 - ARCHV-IMG and ARCHV-EXIF are archive copies of TIFFs only (not for display), they are **EXTERNAL DATASTREAMS**, external to have different storage strategy for larger files
 - VRA Work object (descriptive metadata)
 - describes the thing that is actually photographed (eg. a building)
 - in UI shows related images using VRA work relationships (i.e.. sculptor, painter)
 - Duke, U of Oregon, and Oregon State interested in using DIL code (and interested in Hydra)
