

Installing DSpace 4.2 on Redhat Enterprise 6.5

This is a step-by-step how-to guide to install DSpace 4.2 on Redhat Enterprise v6.5.

- [Install Prerequisites](#)
 - [Install Java](#)
 - [Install Tomcat 7](#)
 - [Install PostgreSQL](#)
 - [Install XML Commons API](#)
 - [Install Ant](#)

Install Prerequisites

Install Java

```
#To check if java is installed:
```

```
java -version
```

```
#If you're running 1.6 or higher, this guide should be fine. If You don't have java:
```

```
yum install java-1.6.0-openjdk*
```

Install Tomcat 7

```
cd /tmp
wget http://www.us.apache.org/dist/tomcat/tomcat-7/v7.0.56/bin/apache-tomcat-7.0.56.tar.gz
tar xzf apache-tomcat-7.0.56.tar.gz
mv apache-tomcat-7.0.56 /usr/local/tomcat7
```

Install PostgreSQL

```
yum install postgresql-server.x86_64
```

Install XML Commons API

```
yum install xml-commons-api
```

Install Ant

```
yum install ant ant-apache-regexp
```
