Or Telephone:
   Dial(for higher quality, dial a number based on your current location):
      US: +1 646 876 9923 or +1 669 900 6833 or +1 408 638 0968
   Meeting ID: 952 326 581
   International numbers available: https://duraspace.zoom.us/zoomconference?m=UwwKqz4RbGAsBAZgCE9XMorMuL0CeV4Q
more details» copy to my calendar

Attendees

- Marijane White
- Brian Lowe
- Christian Hauschke
- Brian Lowe
- Juliane Schneider
- Ralph O'Flinn
- Violeta Ilik

Agenda

1. Documentation for ontology updates
2. Interest Group or Task Force
    a. Marijane agrees with turning the TF into a IG. Identifier task would be as good as anything else. Maybe we can figure the process out as we go. Now that we have sprints, we can fall into this proces.
    b. Brian: Transform seems logical, IG seems to be a good thing.
    c. Christian: I hope we can transfer it into the IG
    d. Violeta: Steering Group suggests this, too.
3. Which task to choose?
    a. Marijane: Identifiers (Identifiers – ORCiD, other – use cases, modeling, software. See draft proposal here: http://bit.ly/2wEyy17) could be a change that could done. Christian s pressing for identifiers. Maybe in or until the sprint. Software change has not to be done in the same time.
    b. Violeta: 18th december there will be a guest from Wikidata at the dev call.
    c. Brian: Are we able to solve the identifier issue until the sprint? There is a need for community feedback. Concern: There could be problems with the way ORCID (or others) denotes URIs.

   mike denoted_by x

        x a ORCiD

        x has_value x^^anyURI

    d. Violeta: We should have a look at Wikidata how they solved this problem. Wikidata ontology: http://wikiba.se/ontology-1.0.owl
        i. https://m.wikidata.org/wiki/Property:P496
        ii. https://m.wikidata.org/wiki/Q51044
        iii. ISNI would be a superclass to ORCID
    e. Juliane: Was thinking about adding ORCID to Eagly-I, good to know it comes from VIVO.
    f. Are we fine with reusing identifiers and structures from somewhere else (library land etc.)
        i. Generally yes.
    g. Christian: Stefan's comment in the identifier doc
    h. Brian: Semantic inconsistencies.
    i. Violeta: Will respond with some links to the history of this discussion.
    j. Christian: Maybe adding an icon to the ID would make sense.
4. Violeta: We need a licence to the ontology, so that wikidata can reuse that.
    a. Violeta CC0 would be good for Wikidata
    b. Marijane: Maybe difficult because we are using (parts of) other ontologies
    c. Brian: We have to be careful what we publish under a licence in our repository. Revisiting the licences would be another task.
    d. Ralph:
        i. I usually like to use LGPLv3 which is Compatible with more than the v2.
            1. https://www.gnu.org/licenses/lgpl-3.0-standalone.html
        ii. If you are wanting to just let people do whatever, but still make sure they at least give credit and don't try to patent your work. (They don't have the share code.)
            1. https://www.apache.org/licenses/LICENSE-2.0.html
    a. Brian will create a issue/ticket next week for the licence work.

b. Juliane: Eagle-I has no licence, too. Will do research on which licence to choose. The outcome of the research will be added to the discussion in JIRA/Github.
5. Language skills – use case, modeling, software. See draft proposal here: http://bit.ly/2wIvd0S (not discussed)

Notes

1. In Progress or Review Ontology Issues

key	summary	type	created	updated	due	assignee	reporter	priority	status	resolution

Unable to locate Jira server for this macro. It may be due to Application Link configuration.
