

2018-12-14 Cornell LD4P2 Meeting notes

Date: 14 Dec 2018

Attendees: Jason, Steven, Huda, Tim, Lynette

Regrets: Simeon

Agenda & Notes

Review actions from 2018-12-07 Cornell LD4P2 Meeting notes

- [Steven Folsom](#) LC Names is in QA without going thru context workflow. [Steven Folsom](#) will work with [Huda Khan](#) to set up.
 - 2018-12-13: awaiting data dump. LC working on it but they have yet to achieve. Larger data set so it's taking time. No deadline provided.
- [Jason Kovari](#) to make a start at brainstorming/planning D&A ideas
 - Earlier idea was to set up homework to brainstorm D&A ideas on Google Doc, then set up longer session together to flesh out. Scan the large set of D&A issues: <https://culibrary.atlassian.net/secure/RapidBoard.jspa?rapidView=19&projectKey=DISCOVERYACCESS&view=planning.nodetail>
 - [Huda Khan](#) set up a call with Astrid that was fascinating (their weekly, informal calls). Huda made fun slides... and facilitated the conversation.
 - Slides: [discovery_brainstorming.pptx](#)
 - What is the [Discovery Affinity Group](#)? Did anything happen here? Tom and Simeon were supposed to be leading this???? (acc'd to wiki)
 - **ACTION ITEMS:**
 - [Jason Kovari](#) going thru CUL's D&A Jira (next week or so)
 - [Huda Khan](#) is working on whether usability work on catalogs has been done internally as well as externally to CUL. Code4Lib journal and another has some details
 - Astrid doing user interviews with microbiologists and music librarians
 - [Tim Worrall](#) will join this effort moving forward
 - [Jason Kovari](#) will schedule formal meeting for those involved in the Discovery work plan for early January
- [Steven Folsom](#) to follow up with [Tim Worrall](#) about status of Discogs work and how it fits with expectations
 - Takaway: until there is a UI to look at data showing up in form, it is hard to assess. Mapping has to happen – and then be in an instance of the BF Editor.
 - Recon strategy around Agents. Huda doing some of this, as was Steven. Write up (link) found that under 50% of Agent IDs in Discogs had a WikiData or id.loc.gov URI. If dedupe, it is a little less but still highly promising. Did not consider performance... questions remain about what script will ping (QA server, Discogs API, etc.)?
 - Tim: on white board, we had the recon work following the selection.
 - Hybrid approach eventually... but first pass will be returning a string for an Agent. Returning JSON-LD and would be paired with BF property - but pointing to string rather than URI initially.
- [E. Lynette Rayle](#) to follow up with [Tim Worrall](#) about whether we can publish Discogs lookup as part of QA because we think others might be interested in using it
 - No progress at present.
 - In earlier meeting, there was an understanding that we would do this. Tim is proceeding under this expectation. Discussed possibility of adding context in same way that context is added in the linked data side-of-things.
 - **ACTION ITEM:** [Tim Worrall](#), [E. Lynette Rayle](#) will take off-line and report back next week.
- [E. Lynette Rayle](#) to follow up with YAML for https://github.com/LD4P/qa_server/issues/13 and https://github.com/LD4P/qa_server/issues/26, then Steven will shepherd the process with the person requesting. Also with Christine and Marc around Wikidata
 - Washington added what was needed for YAML. Needs [E. Lynette Rayle](#) to confirm we don't need more.
 - **ACTION ITEM:** [E. Lynette Rayle](#) : one open PR for demographics. will run tests to see if pass or fail
- [Simeon Warner](#) to mention to [Michelle Futornick](#) the idea of starting a list of topics for our next partner discussion/meetings, and add the notion of what it might mean to "productionize" the QA/Dave setup
 - **DONE**, created <https://wiki.duraspace.org/x/p4B7Bg> and mentioned to Michelle
- Issues: <https://waffle.io/LD4P/ld4p2-cornell>
 - Related to 43, Lynette will create a separate issue for Agrovoc re: URIs changing

Status updates and planning

- Authority Lookups for Sinopia (Production QA instance: https://github.com/ld4p/qa_server/issues/)
 - QA Priorities: [finish refactoring](#), then [accuracy test form](#), then [logging of use](#) (not done yet [Issue #28](#)), then [performance](#) (some reporting added) and/or new authorities
 - Usability work on lookups
 - Wikidata as an authority
 - **ACTION ITEM:** 2018-12-21. Huda will fork Sinopia editor to see what it takes to get front-end to do things to get them in-line with what we want to see... without affecting Stanford's dev
- Prep for Cataloging Sinatra and other 45's (Discogs data, https://github.com/ld4p/qa_server/issues?q=is%3Aissue+is%3Aopen+label%3ADiscogs)
 - Covered in Action Items section. Working on QA for Discogs is in-progress. Once done, will mock it up in instance of BFE
- Enhanced Discovery
 - In early January, meetings will begin to transpire. For more, see previous section in notes
- LD4 Conference
 - Organizing committee kicked off work this week. We will use a process similar to WikiCite whereby people apply to attend with the expectation that this is a participatory conference. More on this soon.
 - The application/nomination process will shape the event. Themes include implementation and community (at the very high level)... with questions in the application around whether people are willing to present... and also a question geared to scope potential facilitated discussions.
- Travel and meetings

- LD4P June 2019 Meeting: Agenda formation: <https://wiki.duraspace.org/x/p4B7Bg>

Next meetings:

- Jason to lead 2018-12-21 & 2019-01-04
- Simeon out for 2018-12-14, 2018-12-21, 2019-01-04
- Tim out 2019-01-04
