

# Support containers with millions of children

Title	Support containers with millions of children
Primary Actor	Repository manager
Scope	Organization (black-box)
Level	Summary
Story (A paragraph or two describing what happens)	<p>Some examples could include a collection with a large number of image files in a flat structure, or folder containing large numbers of machine generated data files. The system must be able to store these sets, provide access to them in a timely manner, not place undue burden on users, and allow for additions to the collection without excessive performance degradation.</p> <p>While we can expect a cost to retrieving representations of a resource with large numbers of children or properties since the response will be large.</p>
