## Notes

- fcrepo-camel-toolbox
  - PR available for review, mainly need to verify the output in places like Fuseki.
- PRs
  - FCREPO-1889 - Still needs a look, Peter previously had a script for this
- Import export - Just danny working on it at the moment
  - Need to capture the locations from header. This would include ACLs, Mementos, external binaries.
    - Unable to locate Jira server for this macro. It may be due to Application Link configuration.
  - For proxy
    - There is already an -x flag which lets you download the external binaries into the export (this may get strange in terms import and capturing headers)
  - Seems like early summer may be a more likely time frame for a sprint
- Does fedora 4 still require pair trees for performance reasons?
  - [https://issues.jboss.org/browse/MODE-2109?\\_sscc=t](https://issues.jboss.org/browse/MODE-2109?_sscc=t)
  - <https://docs.jboss.org/author/display/MODE40/Large+numbers+of+child+nodes#Largenumbersofchildnodes-Unorderedlargecollections>
    - Types of containers in mode shape
    - These were never put into the default fedora CND
  - It would be helpful to have Bess look at Fedora 6, get a sense of her use case for ark identifiers in fedora urls, flat hierarchies
    - Add or update a use case for Fedora 6.

## Actions

- Peter Eichman is planning to work on dc
