5. Priority development work (see backlog)
   a. Priority issues list

## Resources

DuraCloud documentation

1. User documentation (wiki)
2. Deployment documentation (github)

## Minutes

- Updates
  - DuraSpace team: focused on the the merger, so not much DuraCloud activity
  - TDL: The TCDL conference was last week
    - A few more folks interested in the replication task suite. It's broken in version 6.3, hoping this gets resolved in 6.4
    - A lot of folks wanting to push data from DSpace to DuraCloud
    - DPN data: UT and Texas A&M will just re-ingest with Chronopolis
      - UT Rio Grange - Planning to re-ingest
      - Trinity Univ - Have 3 snapshots (not even 100 GB), but haven't indicated what they will be doing
    - TCDL: Will be moving forward with DPLA
    - Finalized developer roadmap: BPress to DSpace, DSpace 7 review
    - Nick just needs time to get back to DuraCloud dev work
    - SCUFUG (Fedora User Group): Texas A&M, UT, Houston
      - Working to migrate content from Fedora 3.8 to 4
      - OCFL discussed at length, this just makes sense
      - Some questions about Fedora 5 migration tooling
- Development work
  - Nick has a list of work to do
  - une, may look at Unable to locate Jira server for this macro. It may be due to Application Link configuration.
- UT Rio G language support. Certain files have non-ASCII characters.
  - This should be fine as long as content is sent in UTF-8 (which is handled by the SyncTool)

# Actions

- Bill Branan will check with Andrea about  in-progress tickets
