2019

The sprint schedule below has been approved by VIVO Leadership Group. Please plan to participate!

- March 18-29
- June 17-28
- October 14- November 1
- December 2-13

2019-03

Objectives

- 1. Complete externalization of Solr and ElasticSearch
 - a. https://github.com/vivo-project/VIVO/tree/sprint-search
 - b. https://github.com/vivo-project/Vitro/tree/sprint-search
- 2. Build VIVO 1.10 Docker image
- 3. Build/Reuse Solr Docker image
- 4. Build/Reuse Elasticsearch Docker image
- 5. Build/Reuse MariaDB Docker image
- 6. Document deployment / installation instructions for Dockerized VIVO
 - a. Including local customizations (third-tier)
- 7. Document development process in the Docker context

2019-06

Objectives

- 1. Enable connection of decoupled, read-only "profiles" user interface to VIVO
 - a. Leverage "Product Evolution" efforts
- 2. Define "shapes" of VIVO entities
- 3. Dockerize appropriate components

Skills

- 1. Experience or interest in the Product Evolution effort
- 2. Experience or interest in UI / UX
- 3. Experience or interest in DocumentModifier or core VIVO functionality for populating external indexes

2019-09

Objectives

- 1. Create ingest workflow tooling
 - a. Use VIVO entity "shapes" defined in sprint-2019-06
 - b. Include validation of ingested entities
 - c. Allow for ingest of JSON entities (tooling to map JSON to RDF)
 - d. Include optional curation step (disambiguation, reconciliation of entities)

Skills

- 1. Experience or interest in SHACL / ShEx (RDF validation)
- 2. JSON-Schema (mapping well-formed JSON into RDF)

3. Ingest / Curation workflows

2019-12

Objectives

1. Based on results of first three sprints
