Preservation and Archiving

Preservation and Archiving Solution Community

The mission of the DuraSpace Preservation and Archiving Solution Community is to establish the community framework to develop and support the preservation needs of the users of repository platforms including scientists, scholars, archivists, librarians, educators, and managers. The scope of the community's effort will be the complete life cycle of the digital object, independent of format, structure, or content. Through a collaborative process, we will leverage existing capabilities from the DuraSpace community and from the larger community that is involved in digital preservation. Our ultimate objective will be to develop the preservation architecture and comprehensive preservation capabilities including frameworks and supporting technologies that can be used selectively.
