

# SW-Use cases

## Use cases from Community members

Not so much 'just' a list of members, but something that we hope will develop into a set of links where you can find out more about work in the Scholars workbench areana.

[The Hydra Project](#) (Universities of Hull and Virginia, Stanford University, Fedora Commons)

[RepoMMan and REMAP Projects](#) (University of Hull. UK)

[Spoken Word Services](#) (Glasgow Caledonian University)

[Enhancing Repository Infrastructure in Scotland](#) (ERIS Partners (lead University of Edinburgh))

## Other work in the Scholars Workbench field

*We are aware of a number of other projects working in the Scholars Workbench field that we hope will join this Community when they hear about it:*

[eSciDoc](#) (FIZ Karlsruhe and the Max Planck Society) is an e-Research environment consisting of three parts: the [eSciDoc Infrastructure](#) (including Fedora), a set of [services](#), and eSciDoc Solutions built on top of the eSciDoc Infrastructure and some of the services. Most interesting for scholars will probably be the solutions [ViRR](#) (an authoring environment for digital editions of scanned materials) and [Faces](#) (a generic image solution with the ability to create arbitrary albums out of image collections). Most of the services can be re-used independently of the eSciDoc Infrastructure and the eSciDoc Solutions.

[Islandora](#) (University of Prince Edward Island) - Islandora is the basis of a number of projects: the Virtual Research Environment (VRE) provides a diverse set of collaborative and repository tools for academics [VRE](#); ResearchSpaces is a pending proposal to [Digging Into Data](#) to build a "Scholars Workbench tool for the Humanities. Islandora provides the glue that binds Drupal and Fedora into a highly flexible and easily customizable environment for digital collections and scholarly activities. [Islandora is hosted](#) at the Fedora Commons.
