

Fedora 6.x Documentation

Fedora is a standards-based, open source repository designed for the robust preservation of digital content. It provides a [REST](#) interface based on web standards including the [Linked-Data Platform \(LDP\)](#), [Web Access Control \(Solid/WebAC\)](#), [Memento](#), and [Activity Streams 2.0](#) specifications. Persistent content is stored on disk using the [Oxford Common Filesystem Layout \(OCFL\)](#), the gold-standard of application-independent, transparent, and robust file storage. Applications can easily integrate with Fedora via the well-documented HTTP interface or via a messaging broker using STOMP or JMS protocols. For more information about the Fedora Repository project and community, go to [Fedora Repository Home](#).
