Fedora 3.4 - Tracker Review

In order to properly scope pre-existing items for the 3.4 release, and ensure the quality/relevance of the items in the tracker, a multi-pass review of of the relevant issues in JIRA is planned.

First Pass: General Review

Who: Chris, Steve and Volunteers
When: Early April

For all Unresolved Issues:

- If it's no longer relevant, close as WontFix
- If it's a duplicate, link to duplicate-of and close as Duplicate
- If it's in the "Recieved" state, determine if it can be opened or should stay closed. If neither, note why in the comments.
- Review metadata for completeness + accuracy (don't worry about the fix version, but do take a guess at relative priority)

Issues Reviewed:

- FCREPO-9 through FCREPO-190

Issues Needing Discussion:

- Enter here

Second Pass: Scoping for 3.4

Who: Steve and Chris
When: Early-Mid April

Note: At this point, it doesn't matter if we think the issues can be resolved in time for the release. We're just saying they're "fair game" for 3.4.

For all Open bugs not assigned to a release (all Open Bugs):

- Mark it for 3.4 if it doesn't involve major architectural changes

For all Open Features or Improvements not assigned to a release (all Open Features or Improvements):

- Mark it for 3.4 if it doesn't involve major architectural changes and ANY of the following apply:
    - it's something we've already talked about it for 3.4
    - it's well-defined and easy to do
    - we already know of someone who is planning to work on it for 3.4

Third Pass: Assignments for 3.4

Who: Steve and Committers
When: Mid April

For all Open Issues scoped for 3.4:

- If an assignee is defined, verify they'll be able to work on it
- If a committer is willing to work on it, add them as the assignee
- If we have no assignee yet, add to "Call for Participation" under Miscellaneous
