Change single page layout (JSP)

<?xml version="1.0" encoding="utf-8"?>
<html>

Files:

- Any JSP in *dspace-source*/jsp/local/

Instructions:

1. Find the following JSP Tag near the top of the JSP:

   ```
   &lt;dspace:layout ... &gt;
   ```

2. Pass this tag any of the following "attributes", to customize the layout of this JSP:

   - ```
     style
     ```

     - specifies the "style" of header/footer to display for this JSP
   - (e.g.)
     ```
     style="myStyle"
     ```

     means the header-myStyle.jsp and footer-myStyle.jsp will be used for this JSP.
   - If
     ```
     style
     ```

     is unspecified, header-default.jsp and footer-default.jsp are used.
   - ```
     navbar
     ```

     - specifies the navigation bar to use for this JSP</p>
   - (e.g.)
     ```
     navbar="myNavigation"
     ```

     means the navbar-myNavigation.jsp will be used for this JSP
   - ```
     navbar="off"
     ```

     turns off the navigation bar on a page.
   - If
     ```
     navbar
     ```

     is unspecified, navbar-default.jsp is used.
   - ```
     locbar
     ```

     - specifies type of location bar to use. There are only a few values of real importance:</p>
   - ```
     locbar="off"
     ```

     - turns off the location bar on this JSP.
   - ```
     locbar="noLink"
     ```

     - do not provide links in location bar.
   - ```
     locbar="commLink"
     ```

- attempt to provide all parent communities within the location bar.
- If

```
locbar
```

is unspecified, all parent communities/collections are displayed as links in the location bar.
3. Perform the steps in Rebuild+DSpace.
