In 2006 the DSpace community has undertaken a major review of the DSpace architecture and technology in order to create a roadmap for platform development that can be implemented over the next year. The following three documents will describe:

- [ArchReviewProcess](#) : the process for moving this work forward (original version in PDF format [attachment:Process.pdf](#) or Microsoft Word format [attachment:Process.doc](#))
- [ArchReviewWorkingPrinciples](#): a set of working principles for the group to follow (original version at [attachment:WorkingPrinciples.pdf](#) or [attachment:WorkingPrinciples.doc](#))
- [ArchReviewIssues](#): a list of issues that the group will address (original version at [attachment:TechnicalIssues.pdf](#) or [attachment:TechnicalIssues.doc](#))

These are draft documents that are being discussed and edited by the group. Nothing is final, and the process will be as open as possible.

The group has the following [ArchReviewMembers](#)

There is a private mailing list ([dspace-review](#), hosted by the University of Toronto) for the group to handle logistics, but as much discussion as practical will be held in open forums such as the [dspace-devel](#) mailing list, and we invite comments and discussion from the entire community during this process.

For questions please contact MacKenzie Smith, MIT Libraries (kenzie@mit.edu) or John Mark Ockerbloom, the chair of the working group at ockerblo@pobox.upenn.edu
