Tagging

Tagging DSpace records by users

The goal of this patch is to add the possibility to tag DSpace records with words proposed by users.

It is based on a previous patch that Desmond Elliott proposed to bookmark records.

It is for DSpace 1.4.2 JSP UI only but it should not be too difficult to port it to newer DSpace versions.

- Tagging DSpace records by users
 - For the users:
 - For the application manager:
 - In dspace/config/dspace.cfg, you can define:
 - Icons:
 - In Messages.properties, you add:
 - For the developpers:
 - in the PostgreSQL database:
 - In the Java Code:
 - New classes (java files attached to this page):
 - Modified classes:
 - In org.dspace.app.webui.jsptag.ltemListTag:
 - in Java Server Pages (JSP):
 - New JSPs (attached to this page):
 - Modified JSPs:
 - in navbar-default.jsp
 - o in display-item.jsp:
 - in mydspace/main.jsp (where you want to display user's tags):
 - in WEB-INF/web.xml:

For the users:

•

• multiple tags can be added to any displayed item by any logged in user:

scorpio;renal

Tag

- Click on one of your Tags
 - renal (1)
 - scorpio (1)
- In the left navigation bar, a "Tag" entry can appear. It gives access to the tags owned by the user but also to the tags of all the other users (collaborative tagging)

				Statute of	£		
v	0		24		-	0	-
	•					u	-
		_	-		-	2	_

2 items found, displaying all items. 1						
Tag 🌻	Your Freq. 💠	Total Freq.				
renal	1	1				
scorpio	1	1				

• a special tag "v" (viewed) is used to simply tick records. This special tag can be set/reset directly from a result list or from the top of a record.

For the application manager:

In dspace/config/dspace.cfg, you can define:

"v" is recommended as a tag for "ticked" records:

```
webui.itemlist.tagviewed = v
```

HTML code to show that a record is ticked (and can be unticked)

webui.itemlist.viewed =

HTML code to show that a record is unticked (and can be ticked)

webui.itemlist.notviewed =

Icons:

- You need one icon for "viewed" records (image/viewed.gif). Something looking like a tick mark in a colored circle.
- You need another one for unticked (but tickable). Something like an empty colored circle
- Examples are attached for testing but I ask you to use your own.

In Messages.properties, you add:

jsp.display-item.bookmark = Record My Tags jsp.mydspace.bookmarks.info1 jsp.mydspace.bookmarks.info2 button. jsp.mydspace.bookmarks.info3 jsp.mydspace.bookmarks.info4 jsp.mydspace.bookmarks.theirs jsp.mydspace.bookmarks.title

- = Your tags have been updated.
- = To tag an item, visit the item's page, put in Tag terms separated by ";" and click on the "My Tags"
- = Below are the items tagged
- = You have not tagged any items.
- = Their Tags
- = Tags
- = Your Tags
 - = Click on one of your Tags:

For the developpers:

jsp.mydspace.bookmarks.yours jsp.mydspace.main.bookmarks.link

jsp.layout.navbar-default.tags = Tags

in the PostgreSQL database:

A new database table must be added:

CREATE SEQUENCE bookmark_seq **INCREMENT 1 MINVALUE 1** MAXVALUE 9223372036854775807 START 1 CACHE 1 ALTER TABLE bookmark_seq OWNER TO <<<Put here the right PostgreSQL user as the table owner>>>; CREATE TABLE bookmark bookmark_id integer NOT NULL DEFAULT nextval('bookmark_seq'::regclass), eperson_id integer, item_id integer, tag_value character varying(128), CONSTRAINT bookmark_pkey PRIMARY KEY (bookmark_id), CONSTRAINT bookmark_eperson_id_fkey FOREIGN KEY (eperson_id) REFERENCES eperson (eperson_id) MATCH SIMPLE ON UPDATE NO ACTION ON DELETE NO ACTION, CONSTRAINT bookmark_item_id_fkey FOREIGN KEY (item_id) REFERENCES item (item_id) MATCH SIMPLE ON UPDATE NO ACTION ON DELETE NO ACTION WITH (OIDS=FALSE); ALTER TABLE bookmark OWNER TO <<<Put here the right PostgreSQL user as the table owner>>>; CREATE INDEX bookmark_idx1 ON bookmark USING btree (eperson_id); CREATE INDEX bookmark_idx2 ON bookmark USING btree (item_id); CREATE INDEX bookmark idx3 ON bookmark **USING** btree (md5(tag_value::text));

In the Java Code:

New classes (java files attached to this page):

- org.dspace.eperson.BookmarkManager
- org.dspace.eperson.Tag

- org.dspace.app.webui.servlet.BookmarkServlet
- org.dspace.app.webui.servlet.ListTagsServlet

Modified classes:

In org.dspace.app.webui.jsptag.ItemListTag:

At the beginning of "getThumbMarkup", you can add the display of the "viewed" tag in search result lists:

```
/* generate the (X)HTML required to show the thumbnail */
   private String getThumbMarkup(HttpServletRequest hrq, Context c, Item item, String suffix)
           throws JspException
    {
       String handle = item.getHandle();
       Bundle[] original = null;
       String tag = "";
       String tagVu = ConfigurationManager.getProperty("webui.itemlist.tagviewed");
       String htmlVu = ConfigurationManager.getProperty("webui.itemlist.viewed");
       String htmlNotVu = ConfigurationManager.getProperty("webui.itemlist.notviewed");
       String vu = "";
       EPerson eperson = c.getCurrentUser();
       if (eperson != null) {
           tag = BookmarkManager.getBookmarkTag(c,eperson,item);
          if (tag != null && (!"".equals(tag))) {
             if ( tag.startsWith(tagVu+";") || (tag.indexOf("; "+tagVu+";")>=0) )
               vu = htmlVu;
              tag = " "+UIUtil.addLinksURL(hrq.getContextPath()+"/bookmark?tag=",";",tag);
           if ("".equals(vu)) vu = htmlNotVu;
        }
       Collection colls[] = null;
       try
        {
                original = item.getBundles("ORIGINAL");
                colls = item.getCollections();
        }
       catch(SQLException sqle)
        {
                throw new JspException(sqle.getMessage());
        }
. . .
```

in Java Server Pages (JSP):

New JSPs (attached to this page):

- mydspace/listtags.jsp
- mydspace/bookmarks.jsp

Modified JSPs:

in navbar-default.jsp

in display-item.jsp:

```
... Imports...
<%@ page import="org.dspace.eperson.BookmarkManager" %>
... Initialization...
    // Show Bookmark or Unbookmark button?
   String bookmarked = "";
       // Marked as viewed?
   boolean vu = false;
    if (currentUser != null) {
        bookmarked = BookmarkManager.getBookmarkTag(context, currentUser, item);
        if (bookmarked != null && (!"".equals(bookmarked))) {
              if ( bookmarked.startsWith("v;") || (bookmarked.indexOf("; v;")>=0) )
                vu = true;
        }
    String otherBookmark = BookmarkManager.getBookmarkOtherTag(context, currentUser, item);
   Where you want to display "ticked" records:
. . .
<%
    if (currentUser != null) {
     if (vu) {
%>
                <a href="<%= locationLink %>?bookmarkremoved=v"><img src="<%= request.getContextPath() %>/image
/viewed.gif" border="0"/></a>
<%
          } else {
%>
                <a href="<%= locationLink %>?bookmarkadded=v"><img src="<%= request.getContextPath() %>/image
/notviewed.gif" border="0"/></a>
<%
          }
%>
... Where you want to display current tags:
<%
    if (bookmarked != null && (! "".equals(bookmarked))) { %>
      <b style="color:Orange;"><fmt:message key="jsp.mydspace.bookmarks.yours"/>: <%=UIUtil.addLinksURL(request.</pre>
getContextPath()+"/bookmark?tag=",";",bookmarked)%></b>
<% }
    if (otherBookmark != null && (! "".equals(otherBookmark))) { %>
      <fmt:message key="jsp.mydspace.bookmarks.theirs"/>: <%=UIUtil.addLinksURL(request.getContextPath()+"
/bookmark?allusers=on&tag=",";",otherBookmark)%>
<% } %>
... Where you want to edit current tags:
        <form method="get" action="<%= locationLink %>" style="display:inline;">
        <fmt:message key="jsp.mydspace.bookmarks.yours"/>: <input size=20 name="bookmarked" value="<%
=bookmarked%>" />
        <input type="submit" name="Bookmark-Flag" value="<fmt:message key="jsp.display-item.bookmark"/>"/>
<% if (otherBookmark != null && (!"".equals(otherBookmark))) { %>
        <br/>><fmt:message key="jsp.mydspace.bookmarks.theirs"/>: <%=otherBookmark%>
<% } %>
        </form>
```

in mydspace/main.jsp (where you want to display user's tags):

```
... Imports...
<%@ page import="org.dspace.eperson.BookmarkManager" %>
... Initialization...
   Context context = UIUtil.obtainContext(request);
   Map taglist = null;
   if (user != null) taglist = BookmarkManager.getBookmarkTags(context,user);
%>
... Display:
<%
if (taglist != null) {
%>
   <a href="<%= request.getContextPath() %>/bookmark"><fmt:message key="jsp.mydspace.main.bookmarks.link"</pre>
/></a>
   <%
       Iterator curTag = taglist.keySet().iterator();
       while (curTag.hasNext())
        {
         String aTag = (String) curTag.next();
         Integer aFreq = (Integer) taglist.get(aTag);
       %><a href="<%= request.getContextPath() %>/bookmark?tag=<%= aTag %>"><%=aTag%> (<%=aFreq.intValue()%</pre>
>)</a><%
       }
   %>
<%
}
응>
```

in WEB-INF/web.xml:

You must add the definitions for the two new servlets (tagging servlet and tags list servlet):

```
...
  <servlet>
    <servlet-name>browse-tags</servlet-name>
    <servlet-class>org.dspace.app.webui.servlet.ListTagsServlet</servlet-class>
  </servlet>
 <servlet>
  <servlet-name>bookmark</servlet-name>
  <servlet-class>org.dspace.app.webui.servlet.BookmarkServlet</servlet-class>
 </servlet>
  <servlet-mapping>
    <servlet-name>browse-tags</servlet-name>
    <url-pattern>/browse-tags</url-pattern>
  </servlet-mapping>
 <servlet-mapping>
   <servlet-name>bookmark</servlet-name>
   <url-pattern>/bookmark</url-pattern>
</servlet-mapping>
•••
```

For any help, I check the DSpace Developpers list often.

Good luck!

Christophe Dupriez
