

Document Preview with Google Docs viewer

What is it?:

Document Preview is embedding a document display mechanism into the item display page. It makes the distance between the item in your repository, and the end user smaller as PDF's no longer require the user to have a PDF Viewer installed on their computer. And its faster, as the document begins loading in the page.

Before installing, be sure to check out Google's Terms of Service, and check that your usage is consistent with your institution's licensing policies, and is consistent with Google's usage policies. <https://docs.google.com/viewer/TOS?hl=en>. Additionally, there are limitations to how far this method can be customized, in which case another solution, such as @mire's document streaming would make more sense.

A Model-Based Analysis of Anxiety and Biased Processing of Threatening Information
Corey White

Abstract

The present study employed a decision model to explore processing biases in anxiety. Anxious individuals show preferential attention to threatening compared to neutral information, which can serve to maintain or increase levels of anxiety. Several models of anxiety predict biased processing of threat under most circumstances, but previous research has failed to demonstrate a threat bias in certain tasks involving word recognition and memory. This has been taken by some researchers as evidence that the threat bias is dependent on contextual factors. An

| HIL ENICH FMS 1.pdf | 2.672Mb | PDF | View/Open or Preview |

The screenshot shows a Google Docs viewer interface. At the top, there's a header with 'View' and various document icons. Below the header, the document content is displayed. The text in the document reads:

Frescoes from Monasteries -
Reel #1
PEĆKA PATRIARŠIJA
The Patriarchate of Peć, a group of churches in the immediate area of Peć & at the entrance to the Rugovo gorge, is one of the most important monuments of the Serbian past. It was the center of the Serbian Church for centuries. From its origin in the 13th century, the Patriarchate attracted learned clerics, reputed writers and gifted artists, and all of them have left traces.

This item appears in the following Collection(s)

Document Preview with Google Docs viewer can be installed on either XMLUI or JSPUI, as it is just embedding a web service on your site.

JSPUI Instructions

Files:

- dspace-jspui/dspace-jspui-api/src/main/java/org/dspace/app/webui/jspTag/ItemTag.java (Item Display Page)
- dspace/modules/jspui/src/main/webapp/utils.js (Custom Javascript)

Instructions:

1. Patch ItemTag.java to add the preview button and the hidden row that contains the iframe.

2. Copy utils.js from dspace-jspui/dspace-jspui-webapp/src/main/webapp/utils.js to dspace/modules/jspui/src/main/webapp/utils.js
 3. Patch utils.js to add some additional needed functions.

```

--- dspace/modules/jspui/src/main/webapp/utils.js
+++ dspace/modules/jspui/src/main/webapp/utils.js
@@ -301,3 +307,36 @@

+function showHideToggle(divID) {
+    if (document.getElementById && !document.all) {
+        previewBox = document.getElementById(divID);
+        var state = previewBox.style.display;
+        if (state == 'block') {state = 'none';} else {state = 'block';}
+        previewBox.style.display = state;
+    }
+}
+
+function urlencode(str) {
+    return escape(str).replace(/\\+/g, '%2B').replace(/%20/g, '+').replace(/\\*/g, '%2A').replace(/\\/g, '%2F').replace(/@/g, '%40');
+}
+
+String.prototype.endsWith = function(str)
+{
+    return (this.match(str+"$") == str)
+}
+
+function setPreviewSource(source) {
+    if(false) {
+        // if you need to change bitstream link to use a web viewable server (used in development)
+        source = "https://kb.osu.edu/dspace" + source;
+    }
+
+    if(source.endsWith(".pdf") || source.endsWith(".doc")) {
+        source = urlencode(source);
+        source = "http://docs.google.com/viewer?url=" + source + "&embedded=true";
+    }
+
+    $("#embed").attr("src", source); //requires jQuery
+    showHideToggle('preview');
+    // and toggle
+}
+
+
```

1. The javascript functions do make minor use of jQuery, which can easily be added:

```

<script type="text/javascript" src="http://www.google.com/jsapi"></script>
<script type="text/javascript">
    google.load("jquery", "1.4");
    google.setOnLoadCallback(function() {
        // Place init code here instead of $(document).ready()
    });
</script>

```

XMLUI Instructions

| HIL ENICH FMS 1.pdf | 2.672Mb | PDF | View/Open or Preview |

The screenshot shows a PDF viewer interface with a single document open. The document contains handwritten text in black ink on white paper. At the top left, it says "Treasures from Monasteries - Reel #1". In the center, it has a large, bold title "PEĆKA PATRIJARŠIJA". Below the title, there is a detailed description of the Patriarchate of Peć, mentioning its location near Peć and the Rujovo gorge, its importance as a center of the Serbian Church, and the many learned clerics, writers, and artists who have lived there.

This item appears in the following Collection(s)

Best practices are to put customizations into a theme directory, and not to modify the dri2xhtml files.

Additional Javascript function, note that you will need to use jQuery.

Add to [dspace/webapps/themes/your-theme/lib/yourtheme.js](#)

```
/***
 * Creates an iframe with the specified source
 * @REQUIRES jQuery
 * @REQUIRES that there exists an element with ID preview-embed
 */
function embeddedPreview(source) {
    if($("#embed").length > 0) {
        //set the source to the location asked for
        $("#embed").attr("src", source);
    } else {
        //Create the embed iframe
        $("#preview-embed").append("<iframe id='embed' src='"+source+"' width='100%' height='342px' style='border:none;'>"); //requires jQuery
    }
}
```

XSL overrides. This adds the "or Preview" link to the item downloads section, as well as an empty div hiding in the table.
Add to [dspace/webapps/themes/yourtheme/yourtheme.xls](#)

```
<!-- Document Preview with Google Docs viewer -->
<!-- Generate the bitstream information from the file section -->
<xsl:template match="mets:fileGrp[@USE='CONTENT']">
