## Notes

1. Presentations upcoming at DLF, Access 2021, Squib. Proposal for Samvera Connect. Information gathering sessions starting this Friday, another on the 27th. Working to confirm a time for a non-North American group. 7 institutions are (hopefully) attending tomorrows. Hoping to hear from under-represented groups.
2. Good presentations. Some questions about metrics and migrating content. Will have a follow-up to get some more information. Will be sending out the video and the slides for anyone interested in reviewing those.
3. Camel Toolbox sprint (October 4-8), has a page. Mostly a testing sprint. Some bugs especially the external content one to be resolved.
  - a. Calvin and Danny working on support for external content with camel-toolbox, when using a redirect and the content is on a remote instance. Seems to have an issue with credentials for the remote instance. Able to index the migrated content, but unable to get the content in a specific file. No password on the remote source but still the redirect is failing.
  - b. PRs to be reviewed/tested
  - c. 500 Server Error when PUTting a file using curl with the `-T` (chunked) option and no Content-type header.
4. Some low hanging documentation tickets to be reviewed.
5. Issues with permissions and usability in the new Atlassian Jira. Reporter field shows a hash of the user id (we think), reviewer field does not auto-complete. There is also an old Kanban board that appears as the default view for the Fedora project. It was for Fedora 3.6 and could be removed.
