Fix ???some.key.name??? (JSP)

Fix `???some.key.name???`

The Messages.properties file has name and value pairs separated by the equal sign. The name is a dot separated set of labels, in some cases this name is replaced by the value for the labeling of buttons in the jspui web interface.

```
jsp.adminhelp = Admin Help...
jsp.administer = Administer
jsp.admintools = Admin Tools
```

Fix for DSpace 1.4.2 and earlier versions

Files:

- [dspace-source]/config/language-packs/Messages.properties
- [dspace-source]/jsp/local/ (JSP producing `???some.key.name???` text)

Instructions:

1. Search for the string inside the question marks in the Messages.properties file.
2. Search for the same string inside the JSP; it should be the value of a `key` attribute to a `<fmt:message>` element. If both the JSP and Messages.properties appear to contain the string, be sure the strings match exactly.
3. If Messages.properties does not contain the string, add it: `some.key.name=Text that should appear`
4. Perform the steps in Rebuild DSpace.

Fix for DSpace 1.5.0 and later

Files:

- [dspace-source]/dspace-api/src/main/resources/Messages.properties
- [dspace-source]/dspace-jspui/dspace-jspui-webapp/src/main/webapp (JSP producing `???some.key.name???` text)

Instructions:

1. Add the missing line to the Messages.properties file
2. Copy & edit file. Look for the original Messages.properties file in
   - `[dspace-source]/dspace-api/src/main/resources/Messages.properties`
   - NOTE: IF you don't have the DSpace Source Code installed locally, you can also download this file via the web. Visit the below site, and browse to the proper **version** of DSpace, then follow the path (see above) to the proper sub-directory to download the original file.
     - http://scm.dspace.org/svn/repo/dspace/tags/
3. Copy the original Messages.properties file to this location in your local DSpace install. (NOTE: You may need to create the 'src/main/resource/' directory, as it doesn't exist by default):
   - `[dspace-source]/dspace/modules/jspui/src/main/resources`
4. Add the missing line to Messages.properties. For example, if the text you say is `???my.key.name???` then add

   ```
   my.key.name  = The Text to Display
   ```

5. If necessary, you may also wish to copy/change the original JSP file. The original can be found at: `[dspace-source]/dspace-jspui/dspace-jspui-webapp/src/main/webapp/`
   - generally put changes in here to keep original files intact (again, you may need to create the `src/main/webapp` directory if it doesn't exist): `[dspace-source]/dspace/modules/jspui/src/main/webapp`
6. Perform the steps in Rebuild DSpace.
