AuthN Followup:

- Issues raised last week, provoked by [FCREPO-847](#)
  - Is JAAS-based pluggability (what FeSL AuthN assumes) sufficient for Shibboleth support?
  - What about the more general scenario where Apache is taking care of AuthN and needs to pass down:
    - REMOTE\_USER
    - User attributes
- Resources we dug up last week:
  - [Oxford SPIE JAAS Module](#)
    - *ajs6f: Just a follow-on note: the SPIE project at Oxford wound down in 2007. I can't find any of their code or much of their website-- at this point, I'm not confident, but I'll send some emails that way and see what I find.*
  - [old shibboleth-dev thread on OhioLINK's GSoC project](#)
  - [recent shibboleth-users thread on how Brown does Fedora with Shib](#)
  - [recent shibboleth-users thread on Shib + JAAS](#)
