Statistics Addon

Statistics - FIXED IN 1.6.0

[last updated: 16 Apr 2010]

DSpace 1.6.0 now includes an improved Statistics engine based on Apache Solr. These statistics are gathered by a new "solr" webapp, and displayed for Communities, Collections and Items in either the XMLUI or JSPUI. For more details see the DSpace 1.6.0 Documentation.

In addition to the supported Statistics in DSpace 1.6.0, there are various *unsupported* statistics "plugins" or "addons" that you can install in DSpace. The following Wiki pages describe these unsupported addons:

- StatisticsAddOn - Developed by Universidade of Minho, and seems to be one of best available
- Google Summer of Code 2007 Statistics - Work by Federico Paparoni out of Google+Summer+of+Code '07
- DspaceStatistics - Out of date proposals for various statistical packages
- Modular Usage Statistics - Proposal for a general view event "tap" usable for gathering statistics
- Statistical Improvements for v1.6 - Ideas for short-term improvement.
