

# OAI

This page is now obsolete. DSpace 3.0 introduced a new OAI server written from scratch that supports virtual sets, filters and provides top performance. See [OAI 2.0 Server](#).

## OAI

[last updated: 6-Aug-2009]The DSpace OAI offers only very basic sets out-of-the-box. Sets are always directly linked to DSpace collections. If customized sets are required, these can only be offered through collection mapping or (core) code changes. This requirement is essential for the DRIVER OAI harvester and some other OAI harvesters

The following Wiki page describes potential solutions for making OAI sets more customizable:

- [DSpaceOAISets](#) - Proposal of solutions for making sets more configurable
