DCAT Feature review of DS-456 Create easy upgrade scripts

JIRA Reference: https://jira.duraspace.org/browse/DS-456

Proposed: The original JIRA ticket advocates for creating easy upgrade scripts, likely in Java. This came up during DSpace Developers meeting on Jan 6, 2010 and this feature was selected as an important one by repository administrators and managers from EIFL network (in spring 2011).

Initial assessment: Relevant to the community; Medium-High or High priority

- If you agree that this feature is important and have no additional comments, you can simply respond with a +1.
- If you disagree but have no comments, a -1 works, and if you have no opinion at all, 0 is fine. (And encouraged, since that means we know you've had a chance to weigh in.)
- If you *do* have comments or other ideas, you're not limited to the numbers, of course. So please do share your thoughts!
