

How do I retrieve the audit datastream?

It is currently not possible to directly retrieve the audit datastream. Therefore, in order to see the audit datastream, you'll need to export the xml of the object. For example: <http://localhost:8080/fedora/objects/changeme:1/objectXML>. It will appear in the export as a datastream called "AUDIT".

In the future, we hope this will be simpler. See [FCREPO-635](#)
