

# fedora-ingest-demos

A convenient script to ingest all included demo objects for a new Fedora installation. See [Demonstration Objects](#) for descriptions of these objects.

## Usage:

```
fedora-ingest-demos [host]
                    [port]
                    [user]
                    [password]
                    [protocol]
                    [context]
```

## Where:

- `host` - the hostname of the Fedora server; default is `localhost`
- `port` - the port number on which the Fedora server is running; default is `8080`
- `user` - the Fedora user (e.g. `fedoraAdmin`)
- `password` - the Fedora user's password
- `protocol` - how to connect to repository, either `http` or `https`
- `context` - an *optional* parameter indicating the webapp context. This is only necessary if the Fedora server was installed under a context name other than 'fedora' (see [Alternative Webapp Context Configuration](#)).

## Example:

```
fedora-ingest-demos localhost 8080 fedoraAdmin fedoraAdmin http
```
