

How do I configure Fedora to allow API-M access from remote hosts?

How do I configure Fedora to allow API-M access from remote hosts?

Fedora's default server security settings disallow remote administrative access. This restriction can be relaxed by either:

1. Modifying (or removing) the `deny-apim-if-not-localhost.xml` policy file.

See the default policy documentation in the user guide:

<http://www.fedora-commons.org/confluence/display/FCR30/Fedora+Authorization+with+XACML+Policy+Enforcement>

See the "Activating and Loading" instructions in the user guide:

<http://www.fedora-commons.org/confluence/display/FCR30/Fedora+Authorization+with+XACML+Policy+Enforcement>

2. Disabling policy enforcement altogether

See the "Enabling/Disabling XACML Policy Enforcement" section in the user guide:

<http://www.fedora-commons.org/confluence/display/FCR30/Fedora+Authorization+with+XACML+Policy+Enforcement>
