Notes

1. Release
 - a. Discussion of newly-opened issues to be resolved.
 - b. Should new codestyle files be merged in 1.14?
 - i. Will do later when we have strategy for enforcing in pull requests.
 - c. README: Use generic documentation link so we don't need to update the link for each version?
 - i. Seems like the best solution. Brian will check the text.
 - d. ChangeSet user info PR will be merged for next release.
2. Jena 4 upgrade
 - a. Great work from Kevin during sprint but needs to be continued.
 - b. Brian will find time in coming weeks to work on this.
3. Dump/restore script
 - a. Dragan: Should some settings continue to be specified in the script itself vs. command line parameters?
 - i. Brian: would be nice to have them all specified the same way.
 - ii. Dragan: Args currently depend on position, not flag like -p -u.
 - iii. Brian: Seems error prone; maybe move all to config file / environment vars?
 - b. Dragan: Where should script go?
 - i. Georgy: /bin directory?
 - ii. Dragan: Problematic because of git ignore.

- iii. Dragan: If in vivo.home, need to be careful not to wipe out existing dumps on redeployment. Will need to think more about these issues before including.
4. Building/installation improvements
 - a. Dragan will wait a day or so for comments about deployment practices survey, then will distribute more widely
5. Dynamic API + JS frontend
 - a. Is Angular still the frontrunner?
 - b. William: Could be, but also depends on whether we want to dive into a static UI or make it dynamic with ontology defining UI on the backend
 - c. Brian would be interested in starting to draft that ontology with current UI features as a starting point.
6. Dynamic API meeting time may need to be shifted again because new time is very early in Texas.
 - a. Will discuss offline on Slack.
