Notes

- WCAG compliance

Dragan: Nothing to report right now, maybe next week.

- VIVO-harvester

Dragan: Community member tried to run harvester, but it hasn't been used for a while, he will be added to slack channel so we can help him. If anyone knows if it is working with 1.13 please give information because it's not so active project and we had some significant changes in the last couple years.

- Customization of ontologies

Dragan: issue was reported when customizing ontologies, I tried to push conversation but I don't know if we had any progress. Will give more info next week.

JUAN REPORTED: Mailing issue reported, but it is maybe resolved in the meantime, will investigate further. SQL exception bug, it looks that only insert is not working but update is working.

- New pull requests

Dragan: Georgy created PR for removing some HTML elements from the data property values. In review I noticed an issue with FTL files, Georgy fixed that as well.

- Consolidation of data

Dragan: Common problem for all RIS, in data harvesting you can collect duplicate data, we need to add deduplication of data tool for admin users. Tool should detect potential duplicates and give functionality to merge references (combine/enrich metadata) through nice GUI or decouple (split) profiles. Enrichment would be nice to be possible through external services (OpenAIRE broker for example).

Michel: We did a lot of work in our institution, we need to add a method in VIVO that can use a natural identifier (like email) that can detect potential matches. Maybe build an identity server where we can identify person, institution and article?
