

Managing Book Objects

The Books Solution Pack introduces some unique management functions to both book and page objects. This section will describe the book management functions.

The Book Management Tab

You can access the book management functions by navigating to a book object and clicking the 'Manage This Book' tab.

Collection Membership

The Collection Membership fieldset allows you to associate a book with more than one collection. Simply click the 'Add Book to Collection' link and choose a new collection to add the book to.

The book is now a member of two different collections.

Once a book belongs to one or more collections, you will also have the option of removing it from any of those collections.

Books must always belong to at least one collection, so you will not see the option to remove a book from a collection until it belongs to one or more collections.

Islandora Downloadable VM
Islandora Virtual Environment

Digital Repository | DIY Interface | Create content | Administer

Home > Digital repository > Book Collection > Elmsdale > Elmsdale

Elmsdale

Description | Pages | Read | Object Details

Collection Membership

Add Book to Collection

Remove Book from Collection

Current Memberships:

Islandora PDF Collection (islandora:sp_pdf_collection)

Remove Book from This Collection

View Metadata

Update Derived Datastreams

Manage Current Datastreams

Permanently Delete this Book

Expand the 'Remove Book from Collection' fieldset

Select the collection to remove the book from

View Metadata

Here you can view the DC metadata for the book object.

[Update Derived Datastreams](#)
Update datastreams for all pages in this book. The stored tiffs will be used to create all derived datastreams.
☐ Refresh OCR for this book
☐ Refresh all derived images
☐ Recreate PDF from scanned text
[Update Page Datastreams](#)

[Manage Current Datastreams](#)

[Permanently Delete this Book](#)

- **Refresh OCR:** If you need to redo the OCR processing for the entire book (rather than one page at a time) you can do so by selecting this option.
- **Refresh All Derived Images:** Use this option to redo the image processing for every page in the book.
- **Recreate PDF From Scanned Text:** This option may be useful if you add or remove pages from the book after the initial PDF is created on ingest.

Manage Current Datastreams

Normally found under the Object Details tab, this section lets you manually replace Datastreams for the book.

[Manage Current Datastreams](#)

Belongs to these collections: Book Collection
Islandora PDF Collection

All Datastreams

Fedora Object-to-Object Relationship Metadata	View	Download	2011-12-21T18:59:55.407Z	text/xml

Dublin core	View	Download	2011-12-20T13:50:33.804Z	text/xml	
Thumbnail	View	Download		image/jpeg	
PDF of Book	View	Download		application/pdf	

Permanently Delete This Book

Normally, deleting book pages and the book object itself are separate processes, but this option lets you delete the book and all its pages at once. There are multiple confirmation steps to make sure you understand what you are doing.
