Fedora Committers

The Fedora Repository [software](#) is open source and released under an [Apache License, Version 2.0](#). The software and associated documentation is developed collectively by a community of *contributors* and *committers*. All interested community members are encouraged to contribute to the project. Contributors who demonstrate sustained engagement with the project through quality participation in meetings, mailing lists, documentation and code updates can be nominated by existing committers to also become a committer. It should be emphasized that committers need not be limited to software developers. Community members with skills in documentation and testing, for example, can also be committers.

Contributor Profiles

The Fedora project depends on the engagement and contributions of community stakeholders. As noted above, contributions can take the form of:

- Documentation review and curation
- Application testing
- Software development

Documentor

Documentors contribute by reviewing, correcting, updating, and enhancing the project documentation found on this wiki targeting users and administrators of Fedora.

Skills

- Interest in technical writing

Tester

Testers contribute by performing and reporting on the outcomes of a wide range of tests, including performance, security, stress, regression, etc. on an on-going as well as release-time basis.

Skills

- Ability to deploy and configure Fedora
- Ability to document and communicate results
- Bonus: Familiarity with testing frameworks, such as Grinder, JMeter, etc

Developer

Developers contribute by writing functional and test code that fixes, hardens, and extends the Fedora codebase.

Skills

- Experience with software development practices (the codebase is primarily Java, but many of the project's contributors do not come with a Java background)
- Experience reading and tracing multi-module codebases
- Experience debugging issues
- Interest in reading community standards and forming implementations around them
