

Lyncode

Lyncode potential contributions to DSpace

We have several developments to DSpace such as:

- Statistics module (improved from dspace-stats, with live statistics) - finishing
- Administration Tools (making some administration tasks (very) simple) - don't have documentation yet
- Auto-deploy mechanism (allows to add add-ons at runtime) - under development
- Several web interface improvements

I would like to discuss with you several things, mainly:

- The event model of DSpace (could be improved)
- The new auto-deploy mechanism. I think it will improve a lot the administration experience, but not only, it would encourage developer community to make their own add-ons.
- A new web interface (based on struts)

OAI 2.0 (XOAI)
