  - Cornell:
    - Review draft release announcement

## Demo(s)

- New feature / visualization examples?

## Concerns / Requests

- improvements to SPARQL query performance from vivo 1.2 to 1.3
- Rebuilding Inferences
  - signal to determine whether it is finished.
  - Reindexing relation.

## Meeting Minutes

### Updates

- Cornell:
  - review the draft release announcement
    - Is it an accurate representation of work
  - After freeze is only bugs but not features
    - Testing for each release is increased by ~ten fold
- UF:
  - eliza has corrected and committed the d2rmap
  - reproducible harvest running
  - file harvester runs with a properly configured harvest
- Demos
- Cornell:
  - vivo 1.3 demo
    - Search relevance
      - Snippets of articles
    - user accounts self editor account.
    - Menu management edited through web interface
      - internal classes to get subgroup of the class within the institution
    - web of science
    - QR codes
    - Rebuild links from the admin page
    - menu page display speed improvements
- Concerns
- The application uses SPARQL Behind the scenes.
  - Maybe different triple stores for future
  - arbitrary queries aren't going to be improved for 1.3
    - Suggestions to be eventually found on the wiki.
- usertesting.mannlib.cornell.edu test 1.3 site
  - recompute inferences.
    - Grep the response
    - To be seen on jira.
