Update on VIVO 1.5.1

beta access available via 1.5 Maintenance branch in SVN – see Getting Involved in Development

Code repository and tracker discussion

As announced two weeks ago, the development call this week will serve as a definitive discussion on the proposed migration of the VIVO, Vitro, and Tools code from SVN on SourceForge to Git on GitHub. We will also discuss migrating our tracker from Jira to the tracker on Github.

Opinions may be registered in advanced on http://vivo.ideascale.com:

- Moving code repository to GitHub
- Also moving tracker from Jira to GitHub

Notable Development List Traffic

- getting started with ingest – why is the triples table in MySQL empty?
- installing the Google Refine extension – issues on Windows?
- blank property and/or class hierarchies (JSON not being properly escaped)
- using LDAP in VIVO at the EPA – any suggestions?
