

Get Publication Attributes Using R

Given a raw URI for a publication RDF page in VIVO, return basic publication attributes. This function does not return enough attributes to make a citable publication reference. Intended use is for publication metrics at the person and organizational level.

Code

```
get.vivo.publication<-function(raw.uri){  
#  
# Given a raw.uri (without the rdf filetype) of a VIVO publication RDF page,  
# return basic facts about the publication. Dereference as needed. Missing  
# attributes are returned as NA  
#  
uri <- make.vivo.uri(raw.uri)  
x <- xmlParse(uri)  
title <- get.vivo.attribute(x,"label","http://www.w3.org/2000/01/rdf-schema#")  
authors <- length(getNodeSet(x,"//d:informationResourceInAuthorship",c(d="http://vivoweb.org/ontology/core#")))  
bibo.type <- get.vivo.type(x,vocab="bibo")  
#  
# deref the publication venue for its name  
#  
xns<-getNodeSet(x,"//d:hasPublicationVenue",c(d="http://vivoweb.org/ontology/core#"))  
if (length(xns)>1) venue<-NA  
else {  
    venue.uri <- make.vivo.uri(xmlGetAttr(xns[[1]],"rdf:resource"))  
    xv<-xmlParse(venue.uri)  
    venue <- get.vivo.attribute(xv,"label","http://www.w3.org/2000/01/rdf-schema#")  
}  
list(title=title,authors=authors,bibo.type=bibo.type,venue=venue)  
}
```

Sample Run

```
> publication.raw  
[1] "http://vivo.ufl.edu/individual/n205365931"  
> get.vivo.publication(publication.raw)  
$title  
[1] "T3 and T4 true vocal cord squamous carcinomas treated with external beam irradiation: a single institution's 35-year experience."  
  
$authors  
[1] 6  
  
$bibo.type  
[1] "AcademicArticle"  
  
$venue  
[1] NA
```

Notes

- We are not returning the author names.
- No date available for the publication. Will need to investigate further.
- In the sample run above, the publication did not have a venue.
