

RunBibutils

This file wraps [Bibutils](#), allowing it to be called using a [RecordHandler](#) and applied to each record.

Bibutils converts from many different formats into the MODS format. The input format is specified as an argument when RunBibutils is executed.

Arguments

Short Option	Long Option	Parameter Value Map	Description	Required
i	input	CONFIG_FILE	record handler for input files	true
l	inputOverride	override the RH_PARAM of input jena model config using VALUE	false	
o	output	CONFIG_FILE	record handler for output files	true
O	outputOverride	override the RH_PARAM of output jena model config using VALUE	false	
f	force		force processing of all input records, even if they are considered already processed	false
b	bibutilsBasePath	BIBUTILS_BASE_PATH	path to folder containing Bibutils binaries	true
m	inputFormat	INPUT_FORMAT	format of the input files. Acceptable values are bib, biblatex, copac, end, endx, isi, med, ris. These translate BibTeX, BibLaTeX, COPAC, EndNote, EndNote XML, ISI web of science, Pubmed, and RIS respectively.	true
