

Vivo Widgets Iteration 7

Vivo Widgets Iteration 7

Completed

- Discuss/research options for pulling recently updated content in VIVO; reach out to core VIVO team
- Open Social widget search
- Add widget pop-up to VIVO templates
- Add widget pop-up to VIVO templates
- JSR Portlet: Add functionality that allows a portlet user-specified query term display the results in the portlet. The search term is then stored as part of the portlet and search is updated upon subsequent visits to the page with the portlet.
- OpenSocial: Same basic options for portlet.
- Turn the Solr index update into a live SPARQL query against the Jena SDB datasource.
- Come up with plan for testing widgets (requires removing shibboleths for widget requests)
- Update sf.net wiki with latest information information

Planned for this Iteration - Not Complete

- Pull event notifications from VIVO (in JMS queue) and update the index based on these changes (working locally)
- Add readme.md and license.txt to repos
- Clean up json/jsonp widget feeds and include extra items
- Remove GSON and use lift-json instead
- JSR Portlet: Add functionality that allows a portlet user specified query term display the results in the portlet
- JSR Portlet: search term is then stored as part of the portlet and search is updated upon subsequent visits

Next Vivo Widgets Iteration 8: May 26 - June 8

- Reach out about changes in VIVO core search and start integrating those changes
- Get update notifications working for VIVO to Widgets is Tomcat
- Start adding documentation
- Start standardizing deployment
