Hello Jim,

In Vitro 2009 version, we can add individual in Chinese name. But in version 1.5.1, Chinese name of individual doesn't work. Please see attached screen capture.

Recent versions of Vitro require a setting change in Tomcat's server.xml file that was not needed in 2009. Make sure your server.xml contains **URIEncoding="UTF-8"** in the active <Connector> element. Without this, non-ASCII characters won't work properly. For example,

```
   <Connector port="8080" protocol="HTTP/1.1"
         connectionTimeout="20000"
         redirectPort="8443"
         URIEncoding="UTF-8" />
```

Only when I omit the URIEncoding attribute can I can reproduce the problem you've shown.
