

# Executing streams of commands

You can pass a sequence of commands into the `dspace` command-line tool using the `read` command.

Execute commands...	this way
...from a file	<code>[dspace]/bin/dspace read a-command-file</code>
...in a pipeline	<code>some-other-command   [dspace]/bin/dspace read -</code> <code>some-other-command   [dspace]/bin/dspace read</code>
