JWPlayer

Overview

JWPlayer is an in-browser multimedia player made by Longtail Video. Islandora uses it to create viewers for objects using the Audio Solution Pack and Video Solution Pack, so that they can be streamed directly inside a user's browser instead of requiring them to download it to their own computers first.

Dependencies

- Libraries API

Provisions

- Audio Solution Pack
- Video Solution Pack

Downloads

The actual JWPlayer files can be downloaded from http://www.longtailvideo.com/jw-player/download/

The Islandora JWPlayer Drupal module required for Islandora integration can be found at the Release Notes and Downloads page.

Installation

The process of installing JWPlayer is broken up into the following steps:

1. Install, enable and set up the Libraries API. Check that page for more information on how to do this.
2. Download and extract the JWPlayer .zip archive from longtailvideo.com
3. Place the '**jwplayer**' folder from the .zip archive into your Drupal site's '**libraries**' folder created when the Libraries API was set up (e.g. sites/all/libraries)

4. Install and enable the Islandora JWPlayer Drupal module

Configuration

Check the Audio Solution Pack and Video Solution Pack pages' configuration sections for more information on how to integrate JWPlayer into Islandora.
